Unsustainable

Worldview

/

PART I

Indefensible  
Worldviews

/

How did the idea come about?

of the earlier worldviews?

As with the decline of the oldest cultures  
carefully kept secret priestly wisdom  
earlier peoples were lost, also fell into  
Knowledge acquired over many decades  
Building the world into oblivion for the most part  
to the victor. Whether this knowledge of the ancients  
would destroy the world  
image contained in all details, today we can  
can no longer be determined with certainty. A lot but  
hettan / Neuouf-  
indicates that they knew more than their  
immediate successor, the Mediterranean peoples of the  
antiquity. The latter were back on the scene again.  
Observation of the environment required them to  
in this way rebuild their science and  
now also reached a specific idea  
of the universe, which is entirely based on impressions  
of the eye.

The scholar at the time went through this in his mind  
known world, so he came to the sea everywhere. The  
He therefore saw apart from this washed-out land  
of the unrelated to the size of the country  
important mountains, rather than flat ones resting in the  
sea  
disc on. This was limited by the heavenly

spheres on which the stars were attached. Well but the image of the heavenly world says it as it is presents to the eye of the beholder, nothing matters about V.', e l4 Tie ^ed "

the construction of the spatial world. The constellations We " en "" n "-

Mellen star groups, which spatially (in the life) stand in extremely different positions, as we know today through the measurements of the star paraila -

determine xen. But this is not apparent to the eye for perception. We have from the depth of the star space not gained through sight Performance.

From these and similar considerations and with the perfection of the astronomical

3

A worldview is not directly wise, all of them worldviews are Products of the imagination

Ptolemaic  
system

natural science  
of the Earth-  
knowledge and  
Worldview devices  
in contradiction

Instruments and auxiliary signals, not least the  
Mathematics, people started from the earlier approaches  
views and transformed what was seen  
flat image through logical consideration  
a spatial one. The most essential tool  
This thought process was the cutting of the per-  
perspective lines through movement, like us  
observe this in the moving train. The surrounding  
The interpreted worldview was therefore a structure of  
thought,  
the result of consideration, i.e. a product of  
Imagination. The direct evidence in the room could  
nor can they be provided for the new corrugated image,  
like for the old one. — This is the only proof  
It is better to agree on the new world view with everyone  
once known facts of the phenomenal world

apply.

So what did this worldview look like? The earth itself, i.e. the ground on which one stood, was one full, stationary ball of matter. This will be surrounded by an immeasurably larger celestial sphere that connected with all the fixed stars from east to west within one day and revolves around the globe. Sun, moon and planets take part in this movement, but also have another own movement. Claudius Ptolemy, the great Alexandrian scholar and astronomer presented these findings in the second century AD. in one work - "Almagest" - together, that formed the basis of all astronomy until the 16th century. This world view is therefore called the Ptolemaic system.

However, over time, knowledge further progress was made and new discoveries were made.

knowledge that is consistent with the previous worldview. There was a contradiction and the question arose: Either the Ptolemaic system is wrong or these are the newly recognized natural phenomena and the natural sciences based on it. But since you are for the correctness of the laws of nature the exact,

direct scientific evidence through experimentation could provide, but the worldview was only one detection that cannot be proven experimentally represented a theoretical speculation, then it was necessary

Unfortunately, this has generally been considered correct so far  
accepted world view be wrong.

/

5

The Copernican worldview.

Now his imagination was being stimulated, his imagination to find a world view that doesn't match the laws of nature, mathematics, celestial mechanics and those recognized as undoubtedly correct facts contradicted. Nikolaus Koper  
Nikus was the name of the man who solved this task. He presented the Copernican system named after him on, which to this day is almost universally considered was viewed correctly.

Did the earlier scholars leave the earth in the world spaces stand still and the entire universe around them same circle, Copernicus rotated this relationship just around. Why should we all care about that? orbit the earth? Let's let the earth rotate orbiting around the sun in space and thinking about whether we can use this hypothesis to understand all phenomena and be able to fully explain facts. Something like that was his train of thought. And lo and behold, after Kepler his orbit calculations, Galileo his fall-law and Newton based his mechanics on gravity had put forward a supplementary hypothesis: it worked.

However, one should not overlook the fact that long before Copernicus, even before Ptolemy, in a purely philosophical way Copernicus called the heliocentric system was provided. The famous philosopher Aristarchus (265 BC) recognized the sun and stars as fixed, the earth as rotating and orbiting. Short Some time later, Eratosthenes (200 BC) determined the size of the earth through degree measurements. Hipparchus (150 BC) then found the most important unequal entities in the movement of the sun and moon, as well the precession (migration of the entire celestial vault around the poles of the ecliptic in approx. 26000 years). This heliocentric world view was developed by

The healthy instinct of the ancients was rejected without further ado and then fell into oblivion. Whether Koper

6

Nikus was familiar with the ideas of his predecessors, we do not know.

In the Copernican system the sun was the Center around which the planets are elliptical train moved. The earth became a planet degraded, which rotated on its axis every day and complete the orbit around the sun in one year ended. As a result, you had to consider the dimensions of the other planets and especially those of the ^ central body, the sun, hugely large "imagine", without first being able to do the set up Prove hypotheses somehow directly or indirectly /u can. However, direct proof will emerge it is difficult to produce any kind of wave image. But indirect evidence was provided by his successors Copernicus later collected a large number. Wholly based on the Copernician tradition today's official science based on his teachings, especially state-recognized astronomy

“proved” with the help of her meticulously working in-house instruments with mathematical certainty and the proverbial "astronomical accuracy" the unintelligible correctness and indispensability of the physical Copernican system. This is so artificial. This was supported by a framework of indirect evidence in science with such suggestive power, that no one who is not considered incurably insane wanted to be clarified, but was allowed to dare, against it

- to kick air, although the Copernican system with the newer findings of our natural sciences relationships are in contradiction.

What do our official astronomers claim?  
men? — They unanimously say something like the following

.ms: Let us raise our gaze to clarity in the night sky, we see an accumulation of countless

- Stars, the so-called Milky Way. On both sides of this ring the layer of stars becomes ever thinner, ergo, they conclude, we are approximately at the center of a huge star lens. The view to

confessor  
Astronomers Littrow, edited by Dr. E. Weife, director of the  
Observatory and professor of astronomy at the University  
of Vienna.

the sun used to be at 4 million degrees  
Looks, today we assume 2000-10000 degrees Celsius.

Mercury, Venus and Earth revolve around the sun along with the moon and Mars as inner planets follows the belt of asteroids or small planets, planets \_ then orbit as outer planets Jupiter, Saturn, Uranus. and Neptune. While Mars orbits around the Sun takes almost 2 years are the outer orbits of such immense extent that Jupiter lasts 12 years and Neptune need 165 years.

The distances of these planets vary between 58 million km for Merkur and 4500 Million km near Neptune. The earth is as a sphere of 12,750 km diameter from the sun 150 distances Millions of km away, which means that the light is 8 1/2 minutes in the sun or the sound takes 15 years. The diameter \*f stem of the planets are: Mercury 4,840 km, Venus 12,700 km. Mars 6,780 km, Jupiter 145,000 km, Saturn 118,000 km, Uranus 50,000 km, Neptune 62,000 km. The moon measures 5,400 km in diameter and is from Earth 584000 km away, an express train would take 270 full Days race to it, but it takes 285 years to reach the sun long or even to the next star 40 million years, not to mention the wide stars, until

to which even the light hastens for many millennia must. An airplane would have to fly for 1000 years, to race the earth around the sun measure. The earth flies at a speed of a second speed of 50 km, so it only needs a year in addition. However, comets even lay in one second Up to about 500 km away, it drips with its fineness haze cover. By the way, this is considered proof of the .absolute emptiness of space.

We cannot understand these huge numbers and are therefore forced to make comparisons. Becomes the sun as a sphere 40 meters in diameter taken into account, the earth is a sphere of 57 cm Diameter at a distance of 4.5 km. The Moon is 11 meters away from Earth as a small one

9

AnsdtaulioSer  
Compare that  
agronomic  
Number inflation

Size of the Meli  
room in the  
imagination of the

Ball 10 cm in diameter. Now you pull it  
Circular orbits and marvel at the guiding suns -  
powers! According to the same picture, Mars is 7 km,  
Jupiter 22 km, Saturn 41 km. Uranus 82 km, Neptune  
130 km away. The sun thus attracts the Neptune  
ball about 1.5 meters in diameter on that path  
from 150 kilometers so energetically that the Neptune  
According to its speed, the ball enters the circular path  
around them is forced.

However, for the other numbers this difference is  
just too big. So you set the diameters  
of the Earth with only 5 mm, that of the Moon with 1 mm  
on, the sun gets 750 mm. The distance earth-  
The Moon will be 190 mm, the Sun-Earth will be 47  
meters. Well

Here, too, unimaginable numbers begin  
values. The next fixed star is already 9000 km away.  
distant. We would have to get within a distance of Sirius  
60,000 km. represent the polar star of 140,000 km,  
for the distant stars or even the nebulae is missing  
compare every idea, because even if  
If we accept the solar system as the norm, then  
we also arrive at incomprehensible numerical values

for the sizes of cosmic space. You forget  
not the comparison 5 mm -Earth diameter against  
140,000,000,000

The astronomer Littrow himself writes about it:  
"These dizzying buzzes of the corrugated room  
No person with feelings other than that can achieve  
greatness  
There\* testimony to those of the powerless shudder before  
the greatness  
the Well before your eyes." . . . "if they are so un-  
Ordinary ones, at least quite unbelievable for them  
Hearing allegations, who can blame them?  
that they either completely  
not listening or only listening with the intention of  
experiencing  
ren, how skillfully the sophist emerges from himself  
pull the noose that has been laid or how finely he starts it  
will throw sand into the eyes of his faithful listeners  
to scatter them at the end of its production  
from a Gallimathias pompous and nothing-

Impossibility  
as part of the  
copernicani  
sodie system

the Komefenbah  
u explain

The arrival  
astronomer  
prediction  
gen does not form  
a proof for  
the rigidity  
of the worldview.

Requirements of an orderly astronomical policy  
time accordingly

The passages cited come from the first  
mentioned works of the famous astronomer Prof.  
White. So we see that the astronomers themselves  
with the richest available to them  
standing finest optical instruments not in  
are able to study the comets and their orbits  
to be able to determine and explain in a flawless manner  
nen. But also with the two closest to us  
standing stars, the Moon and Mercury, are correct  
the calculations and calculations made are not included  
the proverbial astronomical accuracy  
the valley things agree on what the astronomers say

is also openly admitted. Nature just works according to their own views, without caring about those of to worry the astronomers.

After all, these deviations from the established calculated values are not very large and cannot against the Copernican system become. It would be theoretically possible that the same caused by forces unknown to us would. Einstein's theory of relativity shows this in their application to the perihelion movement of the mer- Kur, that also through the imperfection of the calculation tion methods deviations can be explained.

On the other hand, however, you can also not the reality of astronomical predictions as resounding proof of the correctness of the the Copernican system, as is so often the case is done towards the layperson. Also the astro nouns of the ancient Chaldeans were able to do so because of their These predictions partly reflect the world view of the time make. The only proof here is the many years thousands of years old called the Saros period, through which the Lunar eclipses occur with such precision were determined that even with the help of ours modern instruments have no significant influence on this rule correction had to be made.

12

The evidentiary value of the  
astronomical measurements.

What are the astronomers now measuring with their  
wonderful precision instruments? In the main  
just the angle of the face in the sky  
visible image. Direct evidence of their  
statements about distances, sizes, weights,  
These measurements do not represent leaks, etc  
The astronomers' information about distances  
of millions, trillions and trillions of kilos  
meters of glowing giant suns of unfathomable size  
and weight etc. are all more or less one  
Product of thought, imagination, that is  
Imagination and will remain so until it  
manages to invent an instrument that directly  
Measuring the depth of the room is permitted.

So how does the incomprehensible “astro-  
nomic number inflation - caused? The un-  
formed, original thinking, the imagination form  
Eleven people would never have such proof

purely abstract numerical monster! The greatest /\*" her be-  
Superstitions of bygone times don't seem so "auptunge"  
after all.

more outrageous than our claims  
modern astronomers.

As already mentioned, you only measure the facial  
angle of the image we see in the sky,  
whose depth is known to this day  
cannot yet be measured directly. Now we already have it  
learned at school that you have to follow the rules of the  
Trigonometry determines the height of a triangle  
can be as soon as the length of the base and the adjacent  
angles are known. Based on these principles  
(Perfections in measurement and calculation  
nning methods do not change the measurements  
our astronomers of the distances of the celestial  
body, the depth of cosmic space. Let's pull  
from the center of the earth a straight line to the sun,

13

Example of the

astronomical

Measurements

All measurements  
the copernica  
nisdien astro  
nouns based

gen number, the  
Length of the earth  
equator.

from the intersection of this line with the earth's surface  
surface away a second line to the sun and a  
further to the center of the earth, we get a three-  
eck. The base of this triangle is the Earth's radius  
of 6370 km. We then measure using our  
astronomical instruments that work with precision  
the angles of the triangle constructed in this way  
ecks. Everything else is pure calculation work under  
additional  
basics of the well-known mathematical formulas.  
The resulting height of the constructed three-  
ecks is the distance from Sun to Earth. The Perfect -  
introduction of astronomical calculation methods  
nothing changed this principle. Mathematically  
this calculation is completely flawless. We know  
jefct objectively correct the distance between earth and  
sun,  
if, — yes if the basis of our calculation

are correct. The length of the Earth's radius extending from the length precisely determined by direct measurements of the earth's equator was calculated, must be very precise are right and the light of the sun must reach us its path in a hair-sharp straight line without them cover the slightest deviation. Give it up but also just a little off this straight line, so the sides of the triangle are crooked and ours The calculation is therefore incorrect.

Let's do like our astronomers do and assume that the light has been in full effect for millions of years constantly travels in a straight line. We will then we find that based on this assumption and the only secure basis, the length of the Earth's equator, also according to well-known formulas for determining mood of the size of the stars, their surface, Cubic volumes, masses, densities, weights and Attractive forces can reach. All those who wish amazing, dizzying astronomical so numbers were calculated under the silent silent acceptance of the absolutely straight linear light path with "mathematical "accuracy" is calculated from a single

borrowed from the approximately 40,000 kilometers of length of the earth's equator. Is the measured size correct? or if the light deviates from the straight path, so the whole thing has been laboriously toppled for 3 centuries satisfied the house of cards of the "Copernican calculation" together.

The theory of the rectilinear light path is now can no longer be maintained today after through the research of the famous II. a. with the Nobel award-winning Professor Albert Einstein Deflection (curvature) of nearby light proven by masses. (gravity effect) Ver-different, especially for the purpose of verification Expeditions equipped with these claims countries favorable for observation then asked actually determines the curvature of the light rays. Yes, there were even photographs taken of it made. So we call this statement iuich official astronomers themselves as crown also testify to the inaccuracy of theirs lefets the still recognized Copernican worldview

on. But above all, we note. The speaking  
literally accurate astronomical measurements reflect  
speak for themselves. On the one hand, "measures"  
one taking the straight light path as a basis  
the distances of the celestial bodies and comes  
This leads to the well-known inflation of numbers  
.by contrasting the side by gravity  
caused deviation (curvature) of the surface  
from the straight path, without the results of the  
Lefeteren measurement at the first somehow to determine  
take into account.

However, this is also impossible because...  
cannot determine in any way how often and how  
a lot of light in the "infinite" cosmic space  
Legern ways to us through the theories  
that astronomy explores cosmic space in all directions  
is deflected by the force of gravity.

16

The official ones  
Astronomers  
as a key witness  
the incorrect  
ity of astro-  
nomic removal  
distance-  
measurements

All measurements  
on the basis  
position of the straight  
the path of light  
must be false  
if that  
exists at all  
throughout the  
force of gravity  
can be.

Don't come to us with the claim that  
is the deviation of the light from the straight path  
minimal and limited to such and such cases.  
Prove that this deviation (curvature)  
of the light is not also to others, to be aware of our  
places that evade attention, and on a larger scale  
the extent that could take place could never be achieved.  
Let's imagine the curvature of the light nearby  
heavy body firmly, so we are not allowed to do that  
at least possible distraction from this image  
ignore the transmitting light. In this  
in case all measurements must necessarily be incorrect  
be. \*) The valley thing that the light from the gravity  
force is deflected at all, proves the problem-

mathematics of all astronomical measurements  
the basis of the straight light path. Jept understands  
you first see the entire absurdity of astronomy  
Number inflation on such an uncertain basis  
was illuminated.

After all, this is not yet a breakthrough  
Evidence against the Copernican wave image in general,  
but only against the accuracy of the results  
of astronomical measurements. It would be conceivable  
that the proportions etc. would probably be different,  
In principle nothing would change. We  
want to benefit from an investigation into such a possibility  
Let's ignore the problem at this point and deal with it  
Determination of the unprovability of the Copernican

\*) We take this from the magazine ".KOSMOS" issue  
February 2nd.  
1926, Stallsart (Fronkh.-Verlag) from the Aufsatz ".Dunkle

1/

If we do not succeed in this, either the natural laws are wrong, what must be considered excluded or our ideas, the Copemican Worldview. So that of course the basic the astronomical calculations, the degree linear light path, the length of the earth's equator or both, because the incorrectness of mathematics as We cannot accept this either.

18

The Copemican world view

Contradiction with the laws of nature.

What findings are related to the Copernican  
contradictory to the Copernican worldview? This question  
we will examine below. After the  
Naturgesespen (Seen by Boyle and Gay-Lussac)  
The cold in space must reach absolute zero  
of  $-273^{\circ}$ . Filled this space  
originally with ether fog (according to the claims of ether fog  
and  
of astronomy), which develop into countless giant stars in  
the void -  
compressed and thereby the room cold of  $-273^{\circ}$   
ZSJSFESIKF  
generated. These primordial nebulae would have to be  
billions of times thinner  
than the air and still glowing.  
There is a cube with an edge length of 570 m  
therefore approx. 1 gram of material. Not in this one  
anymore  
Perceptible matter then formed points,  
around which the material bunched up and began to  
rotate, always  
attracted more material, got bigger and bigger, until finally  
All matter in space  
the giant stars created in this way  
«was sucked in. Then let our astronomers  
These giant stars form rings from these  
Ejecting planets are created, which in turn  
throwing off moons again and the Copernican one  
world was created in the imagination of science  
stood. (Kant-Laplace).

They now continued to fantasize, they left the moons slowly cool down, then fall into the planets, later the planets into the sun and after all this is complete ended, the matter was beautiful again in the sun had collected, the game started again, sense - and pointless through eons. That just on earth life was possible for a short time them by chance of the favorable location in the desert cosmic space and the logical conclusion for everyone thinking people was therefore that life of man is as senseless and purposeless as the coming and going in the universe.

19

e verification  
of the Sioff in  
Vacuum the

cosmic space

The disperse-  
de Madii the  
Movement

"The Impossible"  
speed a) wave  
Vacuums, the  
eternal duration  
the movement  
and the Ucbcr  
carrying the  
light

An expert that has been known for centuries  
riment would actually have proven to people  
because such a senseless event has a physical  
cal impossibility. If you use the air  
pump a vacuum, an airless space, like that  
Water brought in evaporates instantly.  
Furthermore, the threads evaporate in the electrical  
Light bulbs over time and become black  
covering on the walls. So matter strives for

Space, away from the center in all directions.  
Compression of the substance into steam or gas balls  
is impossible in the empty space of the recipient.  
But also in the vacuum of cosmic space.

But let us acknowledge the existence of such giants -  
Take the sun for granted and think about it  
we, dal) these with a minimum speed of  
Projectiles fly at 20 kilometers per second  
0.5 km 'sec., so every matter would have to be as a result  
of the  
inertia forces inherent in atomic motion  
these suns disperse into space, even more so,  
than all these agglomerations of matter  
should attract each other. ejections and  
Explosions are of course also impossible,  
because science itself claims that  
Suns are densest inside and are therefore missing  
necessary expansion pressure.

On the other hand, space must be pure  
Vacuum\*) because the claimed eternal duration of the  
Movement is otherwise impossible. Again requires  
the transmission of light is necessarily conductive  
Medium. So science constructed itself  
an ether that is at the same time infinitely thin,  
had to be infinitely hard and extremely elastic. As  
she finally realized that there was such a material too  
in the patient world spaces cannot exist, asked  
she developed the theory of electromagnetic fields.

But these also need something to exist  
material medium, because the same science explains  
\*) See oudi Fufcnole p. 16.

the electricity through the material electrons and  
ions. These contradictions close the alleged  
Absolutely empty the infinitely large, 273 degree cold  
outer space, also an eternal duration of the  
movement as well as the transmission of light and  
any long-distance gravity effects. (Gravity).

Quite apart from this, the alleged exclusion  
Spreading of light through the ether or as a field  
in empty rooms to the specified distances  
impossible because the light intensity is  $0/e$  Uebei  
is proven to be the square of the distance  
decreases from the source and our astronomers demand  
s.

the light has a lifespan of hundreds of thousands of worlds  
of years, the light of the star nebula even one  
those extending into the millions and trillions of years  
speak. The measurements made by our physicists in...  
Contrary to those of the astronomers as objectionable  
are free to look at, now create one for the light  
Vibration of 400-800 trillion per second.

This extraordinarily fine, squared distance  
The ebbing vibration should now be a practical one  
have infinite lifespan?

This seems common sense  
Extraordinarily unlikely, one is astonished  
one is almost amazed at the incredibly great naivety  
of astronomers when you look at the result of the  
more recent radio attempts are brought to mind. The  
Tests at the Nauen large radio station showed that  
that if both Nauen and Buenos  
Aires lay in the dark, with short electrical  
Waves (approx. 7 million oscillations per second)  
achieved good communication. On the other hand, during  
the day  
only long electrical waves came (approx. 30,000  
oscillations per second) there. The short ones  
Waves previously ebbed under the influence of the  
Sunlight decreases quickly.

Two things emerge from this. First: longer ones  
Shafts have a longer lifespan. Secondly:  
The light waves affect the electrical waves.

21

The life  
time of  
Cidiies

The ones from the  
Astronomers on  
taken  
Lidiii n tensitäis -  
straight are one  
physicalisdie  
impossibility

The lifespan of the 7 million«  
amount! a fraction of a second. So it can  
the light does not have a vibration that is 100,000 times  
shorter  
live longer. The one assumed by astronomers  
The lifespan of light is practically infinite  
physically impossible.

Furthermore: You can hear sound from echo to echo  
continue, even though the sound source is not functioning  
is. Our astronomers say we do  
Light from a star that has cooled down for millions of years  
perceive. If the light actually had a true  
acceptable lifespan, so it should be  
Extinction of the light source from mirror to mirror  
let it be carried forward.

The exact, scientifically completely sound

free proof of the impossibility of Copernican Distances are hereby provided. If 7 million vibrations only exist for a fraction of a second, 100,000 times shorter oscillations can do not last for millions of years after the long longer lifespan of longer waves and the ebbing of each oscillation squared to the distance is proven beyond doubt. Furthermore, it is mutual Effects of the various waves through the radio attempts proved. So it would have to be through the opposite lateral penetrations of the many myriads of light spheres from infinite distances a general light fog occurs.

By the way, the intensity of the light should be... The place of origin must be so large that despite the rapid Decrease in the square of the distance here still in the visible strength can be perceived. This would result in degrees of intensity in numbers can no longer be represented at all. Such However, light intensities are a physical phenomenon. possibility, because the sun is known to exist- Made from the same materials as the earth. Also the Heat takes the square of the distance from the heat source quickly. As a result, the advantages are

Positions of the astronomers about the giant solar radiation

The temperatures prevailing in the sun are unimaginably high.  $J, te^* / r^{***} e$

The sun's temperature was known just a few months ago years at 4 million degrees Celsius. This one due to the meticulously precise astronomical analysis The claims made in the calculations but with the Seen in all too blatant contradiction to physics today people are "content" with 2,000 to 10,000 Degree. \*) But even with this relatively limited The resulting temperature would have to be different Expansion and gasification to disperse the Sun lead.

On the other hand, it would have to be in space expansion of the masses unhindered by anything the sun cools down again. So nothing here either as contradictions. Neither ours nor any other Sun could be in the "meticulously precisely measured" Distance of 150 million kilometers then necessary help and light intensity. How unimaginably large, this one that no one can imagine doubted decrease in forces squared Distance should be, results from the following Example: If you occupy the 64 fields of the chess board board with grains, on the first 1, on the second

2, on the third 4, on the fourth 8 etc square, then the sixty-fourth field receives 9 trillion on grains - 500 billion tons - 60 milliard railway wagon grain. Get this result one at a distance of 64 units from the starting point. We want it to the imagination left to the reader to imagine what in-degrees of intensity are approximately on Sirius or the Orion Nebula should result if we the intensity of sunlight at the equator equals 1 setjen and those suggested by the Copernican astronomers given distances as a basis.

Let us remind ourselves of the following again  
Facts: The astronomers themselves give the temperature

•) See also Fufatote p. 16.

23

temperature of the sun is only  $2/3000$  degrees Celsius at. \*) However, the statements of the Naturgesepse result a decrease in forces squared to the distance. This means there would be no warming effect on Earth more is possible. These contradictions should official scientists have long since made their stand-

assumption against the Copernican system  
let have.

Like thinking people of the twentieth century  
hundreds of such unimaginable amounts of light and  
whose eternal lifespan could "believe" will  
be a mystery to future generations. We say  
expressly "believe" because our knowledge of  
Light intensities exceed those of sunlight  
at the highest altitudes at which measurements have been  
made so far  
were not made.

Is there a constant radiance of heat

According to the explanations of the star sun, heat death  
leads to it  
/Eeeee? astronomical authorities on the entropy of the  
world.

The worm's death occurs because there is no more  
energy  
can flow back. The dead balls with icy ones  
Temperatures in the equally icy space that the  
radiated amounts of heat as a result of its incomparable  
measurable size only heated a few degrees,  
can never rise again from entropy.  
Since at the same time it is claimed that the world since...  
exists forever, the questions immediately arise:  
Astronomy and why then the world hasn't been around for

a long time

Why has theology fallen victim to entropy? Where does it come from?

If these glowing gas balls, how can they be preserved in icy space?

To answer these questions, the  
Natural science has nothing left but one  
Borrow from theology (Laplace).

For serious people of true religiosity  
this misuse of the concept of God for hardening purposes  
is untenable theories unacceptable. Do you believe?

a personal God, one must without further ado

PART II

The  
new  
worldview

/

The new worldview.

We have in the first part of this book  
it has been perfectly proven that between the two  
principles of today's astronomy and natural sciences  
there is an insoluble contradiction. The  
world always suffers from improbability  
fantastic claims of millions of light years  
distances, sizes, degrees of heat,  
intensities etc., in short, all the nonsense  
the astronomical number inflation is like a card  
house from the fresh wind of human spirits  
coincided. What now? —

The knowledge of all natural sciences  
with correct mathematical calculations and  
reconstruction of the  
Merungen of the direct plane world view,  
We now have to use it to refer to philosophy  
p > e "  
Ways to build the new well image, with everyone  
(Things ran into harmony. We lay  
For this purpose, all the concepts and concepts learned  
I have to accept and discuss ingrained prejudices for a  
while.

we try to find out the facts of the case completely in  
advance  
we seem to be lax.

Let us imagine the time of day and night  
Our body is on the North Pole of the Earth, that's how we  
look  
in the middle of a flat circular disk. At the  
horizon describes the sun within a day  
an exact circle. We can do more through direct  
Do not disclose observation. Since we have our  
I have put the lessons I learned aside, for the sake of it  
All we have to do is have the sun on the horizon  
zone circle. Now we continue in a straight direction  
south (from the North Pole all directions go south)  
and reach the equator. In our own spirit  
We can do this with the speed of thought and  
Hellen felt that on this day at 12 noon  
"Sun, the further we go, the higher it gets  
«Fights in the sky, also its highest at the equator  
Mand reached. There the sun passes exactly vertically

35

Earth, so must  
necessary-

wise the world  
all rotate.

our head. The sun was missing at the same time  
Time at the North Pole close to the horizon and at the  
equa-  
gate over our heads. From both positions  
a right angle, so they are 90 degrees from each other  
removed. Consequently, the ground on which we must  
stand, have the shape of a ball. That much is clear.

But we have already proven above that  
that we are not on the surface of a full,  
Does not include the ball rotating from west to east.  
nen. If the earth doesn't rotate, it must necessarily-  
wisely circle the universe, once within it  
24 hours around the beholder's location. Become  
we return to our observation post  
North Pole, so we actually see the whole northern one  
Half of the universe orbits in the firmament. At the  
South Pole we can make the same observation with the  
southern half of space. Also at the equator  
we see the firmament around our location  
circle.

We now board a balloon with the em-  
the most sensitive instruments are ideally equipped to  
perhaps in the highest attainable to man

Heights to find the solution to the problem. The  
Balloon rises, we see the ground beneath ours  
Feet seemingly sinking and forgotten for some  
Moments all problems in reverent consideration  
this drama. Only the one who controls the instruments  
Serving assistant calls us from time to time  
number of meters of the height reached. Already after  
Before long, we newcomers to the airship guild will notice  
the strong bulging of the earth's crust. Because  
Strangely, the earth's surface does not bulge  
downwards to form a full sphere, but rather inwards  
towards the hollow sphere.

We climb higher and higher. It's always rising  
Horizon with, while the ground beneath us deeper  
and sinks deeper. We are floating in the middle of one  
huge concave spherical shell. Let's raise it  
upwards, we see the firmament, just like

The bulge  
the earth's surface  
area with additional  
taking  
Height for con-  
kaven half-  
bullet

lls as a concave hemisphere, above us. We are  
us at the center of a world characterized by firmament and  
earth  
hollow sphere formed on the surface.

This phenomenon greatly interests us and we  
Therefore, ask the accompanying representative of the  
official  
cial astronomy to explain it. To our  
He cannot surprise us with this scientifically  
give flawlessly, but focus on what is striking  
Phenomenon with optical illusion caused by aerial  
photography  
tion and the like. We want this experience  
But in any case, get to the bottom of the phenomenon,  
put on oxygen apparatus and give the order  
Pointing to the highest attainable height. If  
But we believed that the "fata morgana" of ours  
Astronomers in the thin air of 10,000 meters  
I would stop and we would get some of that here  
claimed convex shape of the earth's surface  
we were wrong. Always  
the horizon continued to rise with us. Even as  
When we finally reach an altitude of 12,000 m, that  
changes

Picture not. We survey in the clear weather a large piece of the earth's surface, namely in the form of a huge kettle. Because the gun-like ones Messungen do not produce any new results we return to the surface of the earth to get the to process wonderful impressions.

We now consider the following thought-gang: By comparing the position of the sun on Although we have expanded the north pole and equator, the earth is that the earth must be a sphere, but the question, "exe or k-on-convex or concave ball openly loaded. What okay actually forces us, apart from the ingrained positions to bend the horizon downwards, to artificially construct a convex sphere? Let's bend the horizon upwards so that we perceive the image in the balloon <i also obtained through logical considerations and Let's examine whether this idea is consistent with the facts known to us.

37

Objections, for example, that those coming towards us

Ships are first seen with the mast pipe.  
We want the whole thing like that to be possibly optical  
universe based on deception for the time being,  
However, they will examine the surface of the earth in  
detail later. Likewise-

We can see this in our observations

There was still no evidence of a concave during the  
balloon flight

sphere, within which then naturally the sun,

Moon and stars, i.e. the entire universe

would be included. The diameter of the earth is

probably 12,750 km, so the stars couldn't

countless light years, trillions of kilometers from

away from us, but in the most mathematically

advantageous location

Case 6375 km from the respective location of the operator

Schauers, i.e. in the center of the world.

However, this assumption is contradicted by the extremely  
Astronomers' precise measurements over distances  
of monstrous proportions. Either

If these measurements are correct, then they are like us

have proven the natural sciences wrong; or the

Measurements are wrong, then the assumption stands

a concave globe, inside of which the corrugated

all located at relatively close distances

finds nothing against it.

There is a third case, namely that

the measurements themselves are correct, but their

accuracy

application to calculations is not applicable. He-  
let us remember that the only real basis is the  
astronomical calculations determine the length of the  
Earth

equator comes into consideration. Those with care and  
Accuracy repeated direct

Measurements of the same entitle us to  
taking the correct wedge of their result. Also the  
Measurements of the visual angles of the seen planes  
Images may claim accuracy. Thus  
remains as a false basis for astronomical calculations.  
calculations only the hypothesis of absolute  
straight light path left. It lights up easily  
one that the enormous numbers are simply untenable

.58

The curves of the are when the light beam of the star is  
crooked

describes paths. The curvature of light  
by the action of gravity

.about today through official astronomy  
determined absolutely perfectly.

But let's take a curvature of the light  
rays, the celestial bodies can be in every LJ (here in the  
possible distance from the location of the observer hollow

ball i

are located, which also provides the most accurate measurement

the weight angle cannot say anything. The concave globe with the universe inside would be possible. It's always about to investigate whether the nature of this "world" .ill in the globe" and celestial mechanics in the resonated with the results of natural science research.

39

The true nature of the universe

Let's examine whether and how there is a curvature of the beam of light in the hollow globe comes and we try on the basis of this undertaking look for the new world view in all its individual aspects to introduce things.

Since Einstein, science has been perfect demonstrated that the effects of gravity bend light. How does earth work in the hollow sphere?

gravity? She can't do that  
Pull the center of the earth, otherwise we wouldn't be able  
to  
live on the inner concave surface of the earth.

Sdiwerkrafl Our investigations revealed the cause

Vibrations of gravity emanating from the material  
of the  $\Lambda$ e/heis of the ether. We call the ethers the lepts,  
small-  
most particles of the substance. He is at rest in himself,  
while its individual polar aligned parts  
chen from east to west around their parallel to the  
Rotate the shaft axis to the stationary axis. Vibrations  
We recognize these particles as force phenomena  
Aether primal material primal power.

Vibrations of the ether arise from  
continuous successive collisions of the particles.  
Depending on the speed, direction and size of this  
We differentiate between etheric vibrations and electrical  
ones  
Waves, light waves, heat waves, gravity waves  
etc. The gravity waves arise as a result of the  
Resistance of the ether to the movement of atoms.  
The different structure of the atoms causes different  
the same movement, therefore also different effects  
to the all-pervading ether  
the weight of the material.

The gravity of matter is on the inner, concave earth surface largest because with increasing depth or height the resistance of the Aethers changes against the atomic movement. The Atomic motion always strives for space. Changes

40

become larger as a result of gravitational radiation  
Mass of the resistance of the ether against the atomic  
origins of the  
movement of smaller ones, the smaller mass becomes  $\frac{1}{2}m$   
 $\frac{1}{2}m \gg \frac{1}{2}m \gg \frac{1}{2}m \sim$   
apparently attracted to the larger one. " du(h kMnere

The same process occurs with magnets.  
The force acting within it influences the ether  
/wipe it and the attracted matter. The  
Vibrations of atoms can be found on this page  
less resistance, the body gives way.  
This brief explanation of the nature of gravity  
was necessary for understanding the following  
Explanations.

So let's look at our drawing number 5.  
The outer circle represents the Earth's equator, the inner  
one  
The fixed star sphere represents the fixed stars

form a sphere, whose outer convex surface we see as a firmament. This conclusion follows from the hypothesis of completely uniform movement and the spherical shape, which does not change over short periods of time. The mutual positions of the fixed stars. Also prominent representatives of official astronomy came, as we have already stated, to the same assumption.

From all points of our inner, concave Earth's surface is now continually subjected to gravity waves inwards. Also from the Fixsternkugel Gravity waves go outwards towards us. It therefore arises between the two balls one through the mutual elimination of gravity force-related indifference zone. About the length and speed of gravity waves are still no reliable measurements available. Here but since Einstein the deflection (curvature) of light is proven perfectly by gravity, then the dimensions of the gravity waves must be in close to those of light waves. The Light produces 400 - 800 trillion oscillations per second. Oscillations of 0.0007—0.0004 mm long. So the gravity waves are also roughly large but are not transversal like light waves,

The .Jiufstei  
gr.n" a" us  
in contrast to-  
traveling  
Sdiiffes

Liriiicurvature  
on the surface of the earth  
area

but longitudinal, in the direction of movement  
lying vibrations.

There is curvature on the surface of the earth  
of light difficult to detect because the distances  
that allow direct measurement are too short.  
However, their actual existence confirms us  
a well-known phenomenon. We're missing  
only the top of a distant tower.  
There is a ship sailing towards us on the sea  
can be directed first with the top of the mast.

This phenomenon is always used as evidence

the convex spherical shape of the earth.  
What about that? Very easy. That from  
light emanating from the top of the mast or tower  
A little distracted and curved on the way to us.  
Our eye now moves its location in that direction  
the angle of incidence and can therefore only be the  
opposite  
perceive positions that are "above the horizon".  
If we increase our position, we see  
corresponding to the changed angle of incidence of the  
curved light beam with increasing elevation  
more and more from fattening or Tower. The same is  
the case when the ship approaches. On  
The shorter path the light beam becomes less  
curved, so the angle of incidence also catches the eye  
Deer changed. We are missing with decreasing  
getting further and further away from the ship. It follows  
apparently up. Compare the one provided  
Drawing.

At short distances the deflection of the  
Imperceptible to light. With a given right  
That's why lower-level physicists say: The light path is  
straight.  
linear. Within the lower sphere of affairs, this is the case  
and even greater distances can be precisely because of  
the curvature of light cannot be reported. Earthly  
Places that are further away are then "underneath."  
the horizon" and in the sky there is no comparison  
point.

All the light that hits us from space  
 Hrahlen struggled to fehniden and  
 are thereby based on the Gefep of the parallelogram  
 the crow distracted. There is only one exception  
 the one who envy the heavy crow waves vertically  
 Uchtfahl.

This process finds its explanation in the fact that  
 that both from the earth's surface and from  
 heavy waves emanating from the fixed star sphere  
 the all-pervading aether in X spheres of The Curvature  
 of incomprehensible subtlety. Every ether particle from the

The beam of light bends deer.

The objection that deer made  
Do the various waves multiply without a trace?  
that is what we want by pointing out the smallness  
of the ways, the constant consistency of the on  
influences that act in places in the universe and  
answer the interference definitions.

Let us now apply the knowledge gained so far  
I also know celestial mechanics. To help  
Explanation of the process of bending light, especially  
We also want it to be more dynamic  
Example of the light source that is most important to us  
Sun, look at.

For this purpose we go into thought  
at the time of the equinox to the equator

The real deal  
movement of the  
Sun

.hoof gait, culture  
mination and  
Downfall of the  
Sun

and see the sun vertically overhead at 12 noon  
our head. The sun rises in the east and  
in the west, therefore describes within 12 hours  
a semicircle, in 24 hours a circle in the  
Plane of the equator of the hollow sphere.

The sun's light hits all places along the length  
of the equator once a day exactly vertical,  
the place in question then has lunch. The beam of light  
the sun, which is exactly above us, cuts through  
detects all the layers between it and the earth's surface  
surface vertical and therefore experiences no distraction.  
However, this relationship changes immediately. The  
Sun sinks towards the horizon, so it goes in

Really further away from us on their circular path around the world axis, the light emanating from it has to travel a long way to get to us and those lying between the sun and us Cutting layers of space crookedly. It kicks therefore a distraction. The curved light The beam now catches the eye at an angle, indicating the location of the Sun in the continuation of the direction of incidence laid at an angle, just like one under the objects lying in water. The direction seen In both cases it does not lead to the place from which the Light goes out.

The further the sun goes on its circular path moves away from us, i.e. rises upwards, the more The incident angle also becomes larger in relation to the vertical direction. angle of light rays. The eye therefore misplaces the sun getting closer to the horizon. This Sefct it away until the sun's rays do not reach us achieve more. The sun sets. In reality- She has only had a quarter of her circle since midday traveled around the world axis. \*)

Since their rays during the day and night the same illuminate exactly half of the equator, so our place of observation is thereby from the

\*) See also drawing no. 3.

44

Light circle eliminated. The sun is now moving 12 hours on the other soap on earth (i.e above) and reaches 90 degrees after this time has elapsed point east of our location, from from which their rays can reach us again. This place has midday, we have sunrise. She is now coming closer and closer to us, our eye relocated according to the changing incidence angle your location ever higher towards the company ment until they reach the highest level after 6 hours reached. We have lunch again. The Rays of the sun fall vertically on us without distraction down, we see the sun in its real place.

How does this process work on the North pole? We see the sun circling on the horizon namely to the right in the sense of the clock hand and state with satisfaction that the rectification of the forces now exists. The one that is always visible here

Rooster of the sun runs parallel with the horizon,  
It must also be parallel to the earth's equator.

Our eye misplaces the apparent location of the  
.Sun on the horizon. We found that  
This can only be the case if we know from that  
The true location of the sun is  $90^\circ$  away, therefore  
The sun must be in the plane of the equator  
Ilohlkugel exact daily circles around the world axis  
describe.

Now three months pass. beginning of summer.  
The sun now makes its daily circles from the creation  
North Pole measured from  $25^\circ$  above the horizon, the  
seasons  
Since their light, as we know from experience,  
Mets only have a  $180^\circ$  hemisphere, so they have to  
we find their true location  $25^\circ$  north of the equator  
i-bene search. The South Pole is then of course of  
No longer reaches your light and lies in the darkness.\*)  
Six months later the North Pole is in  
Dark. The sun rotates as we know by measuring  
results,  $23^\circ$  south of the equatorial plane.

•) MeheZeldinung No. 5.

She doesn't just worry about things every day  
the world, but moved in half  
year also by about 47" perpendicular to its path,  
or if asked, the pendulum once in a year  
between the Tropic of Capricorn and the  
of cancer back and forth. Let us consider that the  
a grooved hemisphere of light rays also revolved around  
this one  
If the number of degrees is moved, this is what we see in  
this regard.  
movement the origins of the displacement of the day and  
Night lengths, the seasons.

It is particularly attractive to imagine the development  
The origin of the different day and night lengths i  
to present the versMede poisons. Let's think about one  
point  
m"?Jm£ and the equator and from there daily  
NaMiangen watching sunrise. On the relevant one  
We have the longitudes of our earth from the north  
to the South Pole from latitude to latitude  
Observation ports brightened. For Spring Day  
and equinox at 12 noon we start with us-  
previous observations. All stations report  
Same time midday, same time sunset  
and the next day sunrise at the same time.  
We now see them every day at the equator  
Sun rises a little further to the left. Under observation  
ter at the South Pole reported fchon in the daytime and  
Equinox following days a complete win-win

that of the sun. Continuous jealous night. His college  
From the North Pole, on the other hand, it gets higher  
every day  
rising of the sun. This information covers everything  
with my own observations below. We drive them  
The sun rises more clearly on the left, on the left is located  
North, at the North Pole, it is ever higher in the sky,  
From the south pole, Re disappeared completely, hence  
the 180°  
large hemisphere of light extends beyond the North Pole  
moves. Your eighth child is now heading towards the world  
level  
The Re operates two cone shells daily. Her  
larger half, Reh is located on the northern half  
globe of the earth. These are determined by logical  
thinking  
The pre-precipitation found is then also replaced by lower  
ones

46

Observational fiations confirmed. During during the day  
not at the equator or close to the equator only  
is getting a little shorter, we reported rudely  
located poles always later sunrise,  
ever earlier sunset. The length of the

The day becomes more and more common as the width increases shorter.

In the northern hemisphere the opposite is true the case. Here the sun sets from day to day Sooner up and later down, the days go by As the northern latitude increases, it gets longer and longer until on June 21st reached the extremes. The eighth of the hemisphere of light circumscribes exactly the Arctic Circle. The Observers at the Arctic Circle report this The sun is high on the horizon, fine colleague from the northern Arctic Circle that the sun quakes down the horizon. It's at the North Pole Sun 23' Above the horizon, permanently to the right circling, but at the South Pole it is complete night, because Here the sun is 23' below the horizon. Report from the Arctic Circle to the Arctic Circle Now our observers day lengths, which gradually increase very specific ratio with increasing development distance from the Arctic Circle increases until in the Arctic Circle the length of the day is 24 hours.

The sun now circles in the plane of the turning point.

circle of cancer. Your hemisphere of light covers each r.ag- and

most of the northern hemisphere of the earth. NaMiangen

47

The real concerns  
because of the  
stars

The procurement  
hey the fix

## Stars

Night the same length. The eighth of the hemisphere of light has the same location as the Welfachfe.

The sun now continues on its path according to the Tropic of Capricorn, which is located on Reached December 21st. Now most of it rotates the hemisphere of light in the southern hemisphere of the Earth. At the South Pole it was a nice day, at the North Pole everlasting night. In between, the days pass from the northern to the southern Arctic Circle.

Let's take a closer look at this process underlying sun movement in the north füdrichlimg clear, lb we find that from the daily orbit of the world by the sun cylindrical spiral has become iTf. The sun oscillates in a spiral between the two turning circles back and forth.

Let us raise our lower gazes to heaven, To fehen us, no matter where on earth except the Poland where we are, that not only the sun, All other celestial bodies also often occur up and down in the gunfire. We think so

The picture below is taken into account of the light paths described above spatially around and find that then also the fixed ones, the planets and the moon rotates around the world once a day must. This would give us a satisfactory explanation of the celestial mechanics of the globe was found, when the movements of the planets and the moon not To be uneven. Yes, also the circulation of the sun differs with the orbit of the fixed stars by about  $1^\circ$  daily. How does lieh explain this?

As is well known, one measures the proper motion of Sun, moon and planets in the fixed star sky, whose stars, as their name suggests, are fixed. Their mutual position does not change or but only so slowly and slightly that we can be ignored. Investigations physical and chemical nature have us led to the assumption that the fixed stars have no intrinsic

48

borrowed celestial bodies, but only radiation points of one consisting of different layers big ball that moves at the same time year after year most moderately once a day to get through the world middle of the northern to the southern polar star going axis rotates. The ones between the layers

Radiation points (fixed stars) located there are probably moving from accumulation of radiant matter. Also the strongest telescopes are not able to capture the fixed stars into slices, i.e. bodies, always you only see bundles of rays. The diameter of this sphere is estimated to be around 1000 km. Her Wall thickness may be about 50 km.

How does the rotation of this star sphere represent our vision? The star we call rising, is located vertically from the points of the sphere above us are  $90^\circ$  away for us, on the edge that has just become visible the ball. The beam of light emanating from it will be on his way through the many between him and the gravity waves that are present to us are exactly the same like the sun's ray deflected, curved and reaches our eyes at a large angle of incidence, so that this him in the direction of this angle relocated, i.e. to the horizon.

Now the ball is rotating. The light of the star reaches our eye under an ever steeper increasing angle of incidence, consequently the eye misplaces its place higher and higher in the sky until we find it look right above us. Now it cuts through Beam of light for everyone between him and us

Gravity waves exactly vertical. Consequently will he is not distracted from his path, our eyes sees him in his true place.

The ball continues to rotate, the angle of incidence of the beam of light that the star sends to us so bigger again. The eye misplaces its intended see place further and further towards the horizon, until the star appears to sink below the horizon.

49

epicycle and  
/lberraion

In reality he is now on the way too strong curvature of the light is not visible Back of the fix learning ball. So this is the case- the same process that we already experience with the sun have written.

The fixed star sphere changes its location within of our globe only very slightly and name our astronomers the changes caused by this

shifts of the stars epicycles and aberration. Between the fixed star ball and the surface our earth has the orbits of the sun, Moon and planets. Their light also reaches us under the conditions described above. We They also see the culmination points, so exactly vertically above us, in their true location. Laterally As a result, we will move their locations accordingly the angle of incidence of the light.

Let's look at the shifts of Sun, moon and planets towards anyone Proper motion places this star ball, we find that the sun of sun.moon lags behind by an average of  $1^\circ$  every day. At and pianos. the pl anelen, this lagging behind is sometimes more, sometimes less, at the moon an average of 13" to reach. Let us now examine this process first at the sun: your daily lagging behind is at the time of the equinox, on which it orbits exactly parallel to the equator,  $1^\circ$ ; at the December 21st, on the other hand, a little more, on June 21st a little more something less.

Lower measurements showed that the solar The disk made its largest breakthrough on December 21st and has its smallest on June 21st. Consequently is they were further away from us on June 21st than on 21st December. The spiral path we created

Therefore it does not have a cylindrical shape, but rather a conical shape.

This conical shape means that the sun is at  
nfnbZhn'Ind 2.1 Dczemb he larger daily circle around the

'you Kc'plrrsdien Weltachfe has to travel than on June  
21st. A

Laws longer path results in the uniform Gcfchwin-

30

dkjkell the sun also also a longer time. The  
.Sun therefore remains at its position on December 21st  
larger distances back against the fixing ball,  
that the well-known Kepler vessels have a different  
find a surprisingly simple explanation. Let's watch  
.at every noon of the year the positions of the  
.Sun in front of the star ball behind it and  
Mark these points for us so that at the end we get the  
“Earth’s orbit”  
of the year the clear path of the sun through the  
Zodiac (ecliptic) created by the Copernican canines  
Allronomists reinterpret it as “Earth’s orbit”.

The DopplerTche principle also finds subtle natural  
legal justification. Comes the light of the sun Doi -Doppler.

in the morning from Osten to West towards us, To see principle through which the entire universe from Ost to West passes through -  
Fördernde magnetische Kraft beschleunigt. The spectrum \ moves from violet. In the evening the light can only move against the direction of the magnetic force are sufficient. Because it comes from the Sun in the world. It must therefore increase the resistance of these Strength Overcoming. The spectrum shifts to red. So with the Earth's trajectory this has nothing to do.

We therefore have formal findings .Sun movement explained in a simple, natural and sensible manner. Let's think about it us, what untrue claims and complicated reinterpretations to explain the same Tatarchen required in the Copernican system The thinking man will not find that for a moment hesitate which of the two reinterpretations of the "Ephemeris image into a spatial world view Give preference to rolling. Both can be proven directly No reinterpretations. The human mind entwines to combine the unknown with the known clarify and it is a rule from ancient times that this is the case the simple explanation of the complicated precession. A great man - Alexander von

Humboldt - once said: There is in the

31

Oer JH/nmeT

ah oh dear  
Deception.

Only simple things; what complicated! jjL lft  
without a doubt manpower. That made him doubt-  
go right.

How nonsensical the assumption of the abfolu  
straight path of light and the practically infinite  
Lifespan of light based on Copernican Earth  
Reinterpretation of the existing flat image into a  
The worldview is clear, as can be seen from just a look at  
the drawing

No. 6. How simple, clear and absolutely practical  
On the other hand, this is the worldview described here.  
The GE-  
disguised nature accessible to direct observation shows,  
that increased with the smallest possible means

Relief is achieved. If this happens in the well-space where we are exposed to any direct observation common point of comparison is missing, different fine?

On the surface of the moon facing us there is no launcher. If lower protectors were sitting there upstairs with their beautiful telescopes and watched on the earth's seas reflections, then they would definitely be in the depths of the Atlantic or Pacific Ocean the true locations of the captured apply things to cloths. They were missing that too Comparison point, which alone is a direct recognition of the Optical deception is possible.

So let's look at the results again lower re-education in lower spirits plartifch before. We are on the inner concave Surface of a large ball, above, after the middle of the well and see a second ball there. In the different layers there is a small ball Radiation points that we see as the starry sky.

So that we don't have this ball as a ball Floating in the sky comes again through her size and secondly by the curvature of the light fray. This leaves us with, as detailed above ordered, the image of the ball over the whole Sky optically pulled apart and appears us this as the firmament, as one over the

directly visible small part of the earth's surface

52

orbits

(parabolas and hyperbolas). After the knowledge that we now have of the true DLC " ■ [ If you have acquired the construction of the far, you can also use these pi {me "en- I Himmels bodies only make circular paths within the earth move around the world axis and the same ones have to always go from east to west because they are the whole thing There is no geomagnetic force flowing through the world would create a reverse movement. (Amp' schesfc). So we need the orbits of this Celestial bodies explain that they are in harmony with the laws of nature. So complicated and Complicates the spells of the planets at first appear at a glance, their meaning is so simple and clear. current explanation.

Let's first look at the earth's surface nearest stationary planet, the moon. The moon describes the same daily circles around the world axis

53

like the sun. But since it is much further from the world axis is removed, these circles must be accordingly

to be taller. The moon takes a long time to do this. So it stays in relation to the fixed star sphere by approx. 13" back daily. See after approximately 27 x /s days we find the moon again in the same place on the fixed star ball, he has it by doing something against it every day their movement lagged behind, in the opposite direction circulate. In reality it increases by 13° every day. left behind and has to keep his old one Plat? reach again.

We also see the disk of the moon- sometimes bigger, sometimes smaller again. Its diameter varies between 0.49" and 0.56°, So he has to go further, then closer again stand us. Furthermore, we see that he at times north, then south again of the sun's path and the equator. Let's put this picture in the spatially in the mind, we get a similar one Spiral path like the sun. Let's mark then the positions of the moon, which he takes daily around midday takes time, at the fixed star sphere, we get a circle that is inclined about 5° towards the ecliptic is. The Copernican "lunar orbit".

Now the strongest evidence for the cooper- nican world view always the explanation (i.e Reinterpretation of the seen image through the imagination) the phases of the moon and the lunar and solar eclipses

nisse mentioned. The attentive reader will  
after we have completed what seem to be the most  
difficult tasks  
happily solved in the simplest way and for the  
most complicated things in the Copernican system  
found a simple and natural explanation  
have the trust in us that we can do this too  
Questions in the same simple and natural way  
will answer.

For a better understanding, let's first see this  
take the simplest case. That's why we're going  
to the equator, look to the sky and see

54

the radiant disk of the full moon. It is  
Midnight, so according to us the sun is at  
rcn previous versions, just opposite on p ' ne asen ° n '  
the other side of the earth, their rays can  
can't reach us because there are between us and her  
lix star ball lies. Now how is it that their...  
.Shine the beautifully glowing full moon  
to reach? You can't get through the fix  
siernball through. Let's look at the light half-  
ball of the sun opposite us, so find

us that it is only as far away as those from us 90  
points on the earth's surface. Our half of the  
Aequator is at 12 o'clock at night  
Dark. Nevertheless, we see the moon shining.  
Since the sun's rays can't get through  
.Sternkugel can pass through, so it is on the direct  
If it is not accessible by them, it remains  
just the assumption! that they are in their curved path  
go further and this way to the moon  
come.

The image of the light rays therefore corresponds to  
ffgeblndaVIMid  
the image of the magnetic lines of force that we know  
obtained when we put a magnet under a paper  
magnCUsdion  
bring it and treat it with the finest iron filings -  $\wedge r$  "f' lines -  
scatter. The magnet organizes the iron filings  
to lines that are known as magnetic lines of force  
draws. The light forms the same lines  
in the magnet (solenoid) earth.

One pole of this ball of light is the am  
Sun visible in the sky. The other pole  
we can't see because it doesn't emit any light,  
.but on the contrary the light comes back through him  
flows to the center of the world. It is always exactly where  
it is  
behind the sun. This our finding will  
confirmed by none other than the highly respected

praised physicist Faraday. According to him behaves the daily variation of the earth's magnetism (deviation of the magnetic needle - inclination and declination) as if they were separated by two magnetic

The daily variation of the poles would be generated, which would be in the atmosphere

of the Earth of apparent motion followed the sun. There are forces above the earth's surface have their place, electrical currents, which run in the atmosphere and which are a particular

create a correct system of forces that orbits the earth once during the day. For the unbiased scientist this statement from one of our best physicists resounding, objective proof of the correctness of the ability of what we do philosophically found world view.

Woisider Erd-Dieter's proof becomes even more compelling if we consider the possible variations of the declination are small. In 1580 France had a local declination of  $11^\circ$  SE'. This then took firm action until it was only 0 Grad in 1663. she got

then weepy, until 1814 at 22° 34' the western one  
Maximum was reached. Since then, she has been taking it  
again  
away. The ancestral pharynx of the fluctuations can be  
found  
Officially unknown yet. The magnet  
"Full Earth' 4 couldn't change fine poles!  
This finding also necessarily points to the origin  
of the earth's magnetism within the concave  
Globe. This is where the magnetic poles can find their  
locations  
relative to the earth's surface the respective forces  
change the situation accordingly.

If we didn't have the one that runs through the whole  
earth-  
the ring of egg bearings that hold the  
magnetic needle  
"!", for would geographical and magnetic  
Poles fall together. That the Eiferlager are real  
the origins of the various geographical locations  
and magnetic poles, results in the irregular lines of  
isogons and isoclines.  
There are also those determined by the compass  
magnetic poles are not exactly opposite, a  
impeccable proof of the distraction of the world-  
power magnetic poles through egg bearings. In sufficient  
height away from the bearings, lower in-

Measurements certainly ensure the agreement of the magnetic and geographical poles with the geographical ones.

Just?! you can also understand why the direction that which was already demonstrated by Ampere, the earth

orbiting Earth's flow from East to West

the perceptible movement of the sun goes and he at noon on the meridian and at night on the meridian.

The radiating pole of the light ball amplifies fine

Power, the opposite pole weakens. There

57

Lunar eclipse of the earth's surface, also the light of the sun reaches the far side turned away from us on the direct path. That's why the visible side remains dark. We observe it with our telescopes and optical devices only have a black disk with reddish a shimmering edge.

At half moon the process is as follows: The half of the moon is illuminated by the light of the sun. The sun is shining, the other half is in the dark and of course we can only see the exposed one. By the sickle, the almost full moon or other phases we need one more or less large part of the illuminated side of the moon, while the other part is in darkness. With this we would also have the moon phases at the highest level explained in a simple way and there are still the lunar and solar lights.

Let's first take the lunar eclipse and imagine we imagine that the returning sunlight on the Magnetic lines follow similar paths from all soaps returns to the adjoining pole. We therefore get after a kind of shadow funnel that comes from the back flooding sunlight. Now if  
This light becomes very thin after the middle free channel swept exactly towards the sun, since their light radiates in all directions, so the light flowing back evenly from all sides returns to the sun through the center of the wave. Therefore, one does not emerge every full moon Lunar eclipse, but only when the sun and Moon was right across from me pleading. Let's draw one Line from the center of the moon to the center the sun, so this line must pass exactly through the central point of the world when a lunar eclipse occurs kick foll. This case naturally occurs because of the relative to the physical deviations of the moon come in.

The process still occurs during the solar eclipse much easier. Between the supervisor's desk

and the sun the moon effectively passes through and  
Accordingly, we can no longer see the sun disk  
catch sight of. We preview the disk of the moon  
pass by the sun's disk. That not everyone  
Month solar eclipse ift, explains it from that  
The moon also often passed gracefully past the sun -  
so that it does not obscure the image of the sun.

Now we still have the orbits of the planets  
and explain the comet. The one next to us  
The celestial bodies located are Mercury and Venus.  
We are confused that the same ones were never very far  
from the  
Remove sun. Furthermore, we know that fie exactly  
like the other planets change their orbits for a while  
change sky. They then move along the fixed star  
whistling towards the sky in the opposite direction.  
The technical expression is: it is declining.

The retrograde described by the artronomists  
mentioned phenomenon if there is now no actual return-  
running from Oft to Weft, but it only appears to us  
protected from the earth's surface as follows, because  
the speed of the planet has changed,  
for his daily revolution around the world  
finished faster than the fixed ball. The planet  
then it does not remain, as usual, just for the day  
towards a point on the fixing ball,  
But something is getting ahead of itself.

Why find the orbits of the planet that are within  
Half of the hollow globe is just a spiral circle  
can present the world, so irregularly?

We find the explanation for this process in  
Disturbances in the planetary orbits caused by  
the solar forces. These affect the blood pressure  
ness of the planets as a disturbance factor and  
speed up or slow down Tie completely  
certain Gerepen.

With Mercury and Venus, which is closest to the Sun  
next beg, find the disturbances of course  
The largest and these two planets can therefore  
just a little away from the sun. The closer I got

the planetary orbits, including the spiral circles around them

Weltachse, against the center of the world, de facto  
rings also find the disruptions. On Neptune, the  
If planets are far away from us, they have the greatest  
effect

weakened. In general, of all the planets  
the smallest daily circles around the world  
pull, which he grasps at the same speed as  
the fixed star sphere travels back. His daily return  
remains just minimal that it repeats after 165 years  
again on the same plane of the fixed star sky  
to be missed just. The moon needs to be the same  
movement only about 27 1/3 days.

Let's look at the above-mentioned circulation times, for we find, (dal) which is closest to the earth's surface celestial bodies located, including the moon, sun, Mercury and Venus, in their daily circles around the world axis lag behind the most. The size of this daily lagging decreases in the same ratio in which the planets are away from the shaft axis. The bigger the distance from the world axis is the greater then of course the one to be covered. Away. Our chemical and physical investigations have led to the conclusion that that the force driving the planet is within itself is to be sought, so that the daily remains behind through the longer path that is further from the world axis. The planet that stands out from the world axis has to travel is sufficiently explained. The planet is itself an engine.

We would be unsure about the orbits of the planets if it were clear. The planets also move within the Globe in spiral circles around the world axis and must look for "eternal, bronze, great visions" "complete the circle of their existence".

So all that remains are the comets that come from the Copernicans as "strange gypsies, whose Comet identification documents never meet the requirements of a proper astronomical police"

designation

not be. We could be content with this,

60

to confirm this judgment of the Copernicans. There but we find ourselves in a pleasant situation /u can that the nature and the paths of this "weird gypsies" can be explained exactly, like this we don't want our findings to the reader withheld.

Farthest from the earth's surface, the comets move as the smallest celestial bodies - if like everyone else in daily circles around the world- <lfe. Since the depths are so close to the fixed ball, so if their speed is about the same as this that of the fixed parent closest to them. As a result of chemical and physical processes inside of the comet it then suddenly lights up and disappears wraps a tail. Through what lies within him, As the impact force increases, its speed becomes speed is so great that in many, ever larger Ber daily circles (spiral) far behind the earth's surface. He gets into the

proximity to the sun, which causes the chemical and physical

alkaline processes within it ebb away. The

Daily circles become smaller again, he returns near the fixed star sphere. Those caused by the

Said processes created power is used up, that

have. In any case, your system will remember these points.

often postponed. But not like that. Let's call  
remind us again that they too  
Copernican with all their beautiful instruments  
nothing else can be seen but the flat image.  
The circulation e.g. B. the 10 Jupiter moons around Jupiter  
They can't see them either, only the places  
of the moons in front of the fixed star behind the  
floorboards  
bullet.

There Pich now the moons of Jupiter, from us  
happened, once a little to the left, the other time a little  
to the right of Jupiter and deer are never far away  
remove him, so this was interpreted as such  
converted the obtained flat image into a spatial one and  
ran)  
in fantasy the Jupiter "moons" around Jupiter  
We marked it in an elliptical path  
from all points in the fixed star sky  
to which a certain moon of Jupiter appears hostile  
went over and connected these points with a line,  
This gave you a figure from which you could, under  
reconsideration of the movement of Jupiter on  
The fixed sky probably has an elliptical orbit around it  
Jupiter could construct. At Pich there is one circulation  
not to prove Jupiter in any way. Direct  
All that needs to be perceived is the outward appearance  
that can be seen in the sky.

and the orbiting of the “moons” around the planet.

This is the same process that we see with Mercury and perceive Venus and he finds his explanation in the same causes. The stronger one on the planet outgoing gravity acts on the same force and thus to the speed of the "moon" once speeding up and then slowing down again mend, giving the impression of a circulation of the of the moon around the planet. In reality The planetary moons also describe the known ones daily spiral circles around the world axis. Will be yours Speed promoted by the planet, so because the circles get bigger, the planetary moons stay a little further back than the fixed star sphere. In the opposite case, if the planet has the speed

62

. -

If the moon is inhibited, the orbit becomes smaller. The Places of the fixed star sphere rush forward, we have the view of the retrograde predicted by astronomers

called apparition. Eclipses of the planets?  
Moons are also possible here and prove nothing  
against our system. Also that the darkened  
problems in the narrower inner pathway occur earlier  
must than in the wider external is only logical.

We repeat all movements in space  
go from east to west without exception  
from the north to the south pole through the center of the  
Ursadte de>

World axis going around the world, every day. Also the  
planetary

The speed of movement is constant in every planet's orbit  
in itself quite uniform and is essentially

determined by the mass of the planet. The drive

the rotation of the earth. In reality proves

it's just that in the atoms of the pendulum weight these .the same forces are active as in the planet. Both will through the rotation of the ether particles into it East-west rotation forced. The pendulum behaves like a planet. That falling bodies east of the perpendicular is due to the deflection of the plumb line the one described, from the rotation of the ether atoms resulting magnetic energy that fills the entire universe Power. The falling weight is due to its own speed less from the all-power to the west relegated as the retired Lot. .

65

It would now be the so-called precession, the slow migration of the vernal equinox to explain the zodiac. The spring equinox

- Precession can be determined by looking at the Earth's equator

Position of the sun at the fixed point behind it marked by a star ball during the spring equinox. The Copernican Astronomers claim that this vernal equinox in Over the course of about 26,000 years, the entire animal world circle and reached its old place. This seems highly unlikely to us, since in the development of the world over such long periods of

time

but progress is being made and so it is essential deviations must come about. We recognize Furthermore, the observations of astronomers are full at. There is no reason to assume that the Daily circle spiral of the sun unchangeable for eternity times is coupled with the fixed star sphere. Man can very well be the spiral as it progresses revolving around itself for 26,000 years Imagine the whole thing, it moves opposite each year of the fixed star sphere by a small amount.

Now we have some more information about them The proportions and distances of this world to do anything in the world. We emphasize that we these dimensions do not owe to direct measurements, but found them through calculations, similar to how the Copernican astronomers did theirs Number inflation. However, there is a fundamental the difference. The basics of our calculations genes are in harmony with the laws of nature so right, while this is the case with the Copernican is not the case, the results of their calculations therefore it must necessarily be wrong.

Let's start from the Earth's equator. Diefer forms a circle, deffen radius approx. 6370 km ift. We confused alfo effectively that the center of the world from the earth's surface at the equator this number Kilometers away ift. Between him and us must

the camouflaged perceptible world is now located.  
We now want official information from the surface of the  
earth  
distances, and true transmitters of the celestial  
indicate body in round numbers.

All the light that hits us from space  
Hrahlen struggled to fehniden and  
are thereby based on the Gefep of the parallelogram  
the crow distracted. There is only one exception  
the one who envy the heavy crow waves vertically  
Uchtfahl.

This process finds its explanation in the fact that  
that both from the earth's surface and from  
heavy waves emanating from the fixed star sphere

Light waves are now no longer in use passed on in the original direction. The direction

- Deer changes the difference depending on the strength level

ile shocks caused by the heavy waves on the ether particles and those of the light source. The beam of light bends deer.

The objection that deer made

Do the various waves multiply without a trace?  
that is what we want by pointing out the smallness of the ways, the constant consistency of the on influences that act in places in the universe and answer the interference definitions.

Let us now apply the knowledge gained so far I also know celestial mechanics. To help Explanation of the process of bending light, especially

We also want it to be more dynamic  
Example of the light source that is most important to us  
Sun, look at.

For this purpose we go into thought  
at the time of the equinox to the equator

43

The real deal  
movement of the  
Sun

.hoof gait, culture  
mination and  
Downfall of the  
Sun

and see the sun vertically overhead at 12 noon  
our head. The sun rises in the east and  
in the west, therefore describes within 12 hours  
a semicircle, in 24 hours a circle in the

Plane of the equator of the hollow sphere.

The sun's light hits all places along the length of the equator once a day exactly vertical, the place in question then has lunch. The beam of light from the sun, which is exactly above us, cuts through and detects all the layers between it and the earth's surface vertically and therefore experiences no distraction. However, this relationship changes immediately. The sun sinks towards the horizon, so it goes in really further away from us on their circular path around the world axis, the light emanating from it has to travel a long way to get to us and those lying between the sun and us cutting layers of space crookedly. It kicks therefore a distraction. The curved light beam now catches the eye at an angle, indicating the location of the sun in the continuation of the direction of incidence laid at an angle, just like one under the objects lying in water. The direction seen in both cases it does not lead to the place from which the light goes out.

The further the sun goes on its circular path moves away from us, i.e. rises upwards, the more the incident angle also becomes larger in relation to the vertical direction. angle of light rays. The eye therefore misplaces the sun getting closer to the horizon. This

Set it away until the sun's rays do not reach us  
achieve more. The sun sets. In reality-  
She has only had a quarter of her circle since midday  
traveled around the world axis. \*)

Since their rays during the day and night  
the same illuminate exactly half of the equator,  
so our place of observation is thereby from the

level  
The Re operates two cone shells daily. Her  
larger half, Reh is located on the northern half  
globe of the earth. These are determined by logical  
thinking  
The pre-precipitation found is then also replaced by lower  
ones

Observational variations confirmed. During during the day not at the equator or close to the equator only is getting a little shorter, we reported rudely located poles always later sunrise, ever earlier sunset. The length of the The day becomes more and more common as the width increases shorter.

In the northern hemisphere the opposite is true the case. Here the sun sets from day to day Sooner up and later down, the days go by As the northern latitude increases, it gets longer and longer until am June 21st reached the extremes. The eighth of the The hemisphere of light circumscribes exactly the Arctic Circle. The Observers at the Arctic Circle report this The sun is high on the horizon, fine colleague from the northern Arctic Circle that the sun quakes down the horizon. It's at the North Pole Sun 23°' Above the horizon, permanently to the right circling, but at the South Pole it is complete night, because Here the sun is 23°'n below the horizon. Report from the Arctic Circle to the Arctic Circle

Now our observers day lengths, which gradually increase very specific ratio with increasing development distance from the Arctic Circle increases until in the Arctic Circle the length of the day is 24 hours.

The sun now circles in the plane of the turning point.

circle of cancer. Your hemisphere of light covers each r.ag- and

most of the northern hemisphere of the earth. NaMiangen  
The male hemirphere is largely in darkness. I p" nft \*,,

Let us now consider that the sun's hemisphere of light is j  
er jr rjc±  
borrowed once a day parallel to the plane of the equator  
what the world revolves around, we understand without  
difficulty  
the distributed day and night lengths at the different  
various points on earth.

Now the sun is moving slowly again  
South and reached the plain of the on September 21st  
Equators. Jept find day and day all over the earth

The real concerns  
because of the  
stars

The procurement  
hey the fix  
Stars

Night the same length. The eighth of the hemisphere of  
light has  
the same location as the Welfachfe.

The sun now continues on its path  
according to the Tropic of Capricorn, which is located on  
Reached December 21st. Now most of it rotates  
the hemisphere of light in the southern hemisphere of the  
Earth. At the South Pole it was a nice day, at the North  
Pole  
everlasting night. In between, the days pass  
from the northern to the southern Arctic Circle.

Let's take a closer look at this process  
underlying sun movement in the north  
füdrichling clear, lb we find that from the daily

orbit of the world by the sun  
cylindrical spiral has become itf. The sun oscillates  
in a spiral between the two turning circles  
back and forth.

Let us raise our lower gazes to heaven, To fehen  
us, no matter where on earth except the  
Poland where we are, that not only the sun,  
All other celestial bodies also often occur  
up and down in the gunfire. We think so  
The picture below is taken into account  
of the light paths described above spatially around and  
find that then also the fixed ones, the planets  
and the moon rotates around the world once a day  
must. This would give us a satisfactory explanation  
tion of the celestial mechanics of the globe was found,  
when the movements of the planets and the moon  
not To be uneven. Yes, also the circulation  
of the sun differs with the orbit of the fixed stars  
by about  $1^\circ$  daily. How does lieh explain this?

As is well known, one measures the proper motion of  
Sun, moon and planets in the fixed star sky,  
whose stars, as their name suggests, are fixed.  
Their mutual position does not change or  
but only so slowly and slightly that we  
can be ignored. Investigations  
physical and chemical nature have us  
led to the assumption that the fixed stars have no intrinsic

borrowed celestial bodies, but only radiation points of one consisting of different layers big ball that moves at the same time year after year most moderately once a day to get through the world middle of the northern to the southern polar star going axis rotates. The ones between the layers Radiation points (fixed stars) located there are probably moving from accumulation of radiant matter. Also the The strongest telescopes are not able to capture the fixed stars into slices, i.e. bodies, always you only see bundles of rays. The diameter This sphere is estimated to be around 1000 km. Her Wall thickness may be about 50 km.

How does the rotation of this star sphere represent our vision? The star we call rising, is located vertically from the points of the sphere above us are  $90^\circ$  away for us, on the edge that has just become visible the ball. The beam of light emanating from it will be on his way through the many between him and the gravity waves that are present to us are exactly the same like the sun's ray deflected, curved and reaches our eyes at a large angle of incidence,

so that this him in the direction of this angle  
relocated, i.e. to the horizon.

Now the ball is rotating. The light of the star  
reaches our eye under an ever steeper  
increasing angle of incidence, consequently the eye  
misplaces  
its place higher and higher in the sky until we find it  
look right above us. Now it cuts through  
Beam of light for everyone between him and us  
Gravity waves exactly vertical. Consequently will  
he is not distracted from his path, our eyes  
sees him in his true place.

The ball continues to rotate, the angle of incidence  
of the beam of light that the star sends to us  
so bigger again. The eye misplaces its intended  
see place further and further towards the horizon, until  
the star appears to sink below the horizon.

49

epicycle and  
/lberraion

In reality he is now on the way  
too strong curvature of the light is not visible  
Back of the fix learning ball. So this is the case-  
the same process that we already experience with the sun  
have written.

The fixed star sphere changes its location within  
of our globe only very slightly and name  
our astronomers the changes caused by this  
shifts of the stars epicycles and aberration.  
Between the fixed star ball and the surface  
our earth has the orbits of the sun,  
Moon and planets. Their light also reaches us  
under the conditions described above. We  
They also see the culmination points, so exactly  
vertically above us, in their true location. Laterally  
As a result, we will move their locations accordingly  
the angle of incidence of the light.

Let's look at the shifts of  
Sun, moon and planets towards anyone  
Proper motion places this star ball, we find that the sun  
of sun.moon lags behind by an average of  $1^\circ$  every day. At  
and pianos. the pl anelen, this lagging behind is  
sometimes more,  
sometimes less, at the moon an average of  $13''$   
to reach. Let us now examine this process  
first at the sun: your daily lagging behind  
is at the time of the equinox, on which

it orbits exactly parallel to the equator,  $1^\circ$ ; at the December 21st, on the other hand, a little more, on June 21st a little more something less.

Lower measurements showed that the solar disk made its largest breakthrough on December 21st and has its smallest on June 21st. Consequently is they were further away from us on June 21st than on 21st December. The spiral path we created Therefore it does not have a cylindrical shape, but rather a conical shape.

This conical shape means that the sun is at  
nfnbZhn'Ind 2.1 Dczemb he larger daily circle around the

'you Kc'plrrsdien Weltachfe has to travel than on June 21st. A

Laws longer path results in the uniform Gcfchwin-

30

dkjkell the sun alfo also a longer time. The .Sun therefore remains at its position on December 21st larger distances back against the fixing ball, that the well-known Kepler vessels have a different find a surprisingly simple explanation. Let's watch

.at every noon of the year the positions of the  
.Sun in front of the star ball behind it and  
Mark these points for us so that at the end we get the  
“Earth’s orbit”  
of the year the clear path of the sun through the  
Zodiac (ecliptic) created by the Copernican canines  
Allronomists reinterpret it as “Earth’s orbit”.

The DopplerTche principle also finds subtle natural  
legal justification. Comes the light of the sun Doi -Doppler.  
in the morning from Often to Weft towards us, To see  
principle  
through which the entire universe from Oft to Weft passes  
through -  
Firömende magnelifehehekraft embechleunigl.The  
spectrum

Deception.

Only simple things; what complicated! jjL Ift  
without a doubt manpower. That made him doubt-  
go right.

How nonsensical the assumption of the abfolu

straight path of light and the practically infinite  
Lifespan of light based on Copernican Earth  
Reinterpretation of the existing flat image into a  
The worldview is clear, as can be seen from just a look at  
the drawing

No. 6. How simple, clear and absolutely practical  
On the other hand, this is the worldview described here.  
The GE-  
disguised nature accessible to direct observation shows,  
that increased with the smallest possible means  
Relief is achieved. If this happens in the well-  
space where we are exposed to any direct observation  
common point of comparison is missing, different fine?

On the surface of the moon facing us  
there is no launcher. If lower protectors were sitting there  
upstairs with their beautiful telescopes and watched  
on the earth's seas reflections,  
then they would definitely be in the depths of the Atlantic  
or Pacific Ocean the true locations of the captured  
apply things to cloths. They were missing that too  
Comparison point, which alone is a direct recognition of  
the  
Optical deception is possible.

So let's look at the results again  
lower re-education in lower spirits plartifch  
before. We are on the inner concave  
Surface of a large ball, above, after  
the middle of the well and see a second ball there.

In the different layers there is a small ball  
Radiation points that we see as the starry sky.

So that we don't have this ball as a ball  
Floating in the sky comes again through her  
size and secondly by the curvature of the light  
fray. This leaves us with, as detailed above  
ordered, the image of the ball over the whole  
Sky optically pulled apart and appears  
us this as the firmament, as one over the  
directly visible small part of the earth's surface

52

Ringed bell. The one on the outer edge of the sphere  
we see eleven pleading stars  
Angle of incidence on the horizon, the others in the dem  
Angle of incidence of the light emitted from them  
rays corresponding height in the firmament. The  
opposite distance conditions have 1 1 differences of the  
This doesn't change the situation in the slightest. The  
find the true locations of the stars on the fixed sphere  
separated from each other in the same proportion as  
we'll see it in the sky. This is the same process,  
that we perceive when looking into a microscope.  
Small deviations that also appear in the Copernican cane  
Syrians teflzuflellen find (epicycle and aberration)  
There is no need to change these explanations.

But now we know that between fixed star sphere and earth's surface except for the sun comets, as well as the planets Neptune, Uranus, Saturn, Jupiter, the asteroids, Mars, Venus, Mercury and the moon is located. They change their places compared to the fixed star sphere extraordinarily different different, so that in the Copernican system one e.g. B. the comets sometimes have completely fantastic orbits

(parabolas and hyperbolas). After

the knowledge that we now have of the true DLC " ■ [

I Himmels bodies only make circular paths within the earth move around the world axis and the same ones have to always go from east to west because they are the whole thing

There is no geomagnetic force flowing through the world would create a reverse movement. (Amp'

schesfc). So we need the orbits of this

Celestial bodies explain that they are in harmony

with the laws of nature. So complicated and

Complicates the spells of the planets at first

appear at a glance, their meaning is so simple and clear. current explanation.

Let's first look at the earth's surface

nearest stationary planet, the moon. The moon

describes the same daily circles around the world axis

like the sun. But since it is much further from the world axis is removed, these circles must be accordingly to be taller. The moon takes a long time to do this. So it stays in relation to the fixed star sphere by approx. 13" back daily. See after approximately 27 x /s days we find the moon again in the same place on the fixed star ball, he has it by doing something against it every day their movement lagged behind, in the opposite direction circulate. In reality it increases by 13° every day. left behind and has to keep his old one Plat? reach again.

We also see the disk of the moon- sometimes bigger, sometimes smaller again. Its diameter varies between 0.49" and 0.56°, So he has to go further, then closer again stand us. Furthermore, we see that he at times north, then south again of the sun's path and the equator. Let's put this picture in the spatially in the mind, we get a similar one Spiral path like the sun. Let's mark then the positions of the moon, which he takes daily around

midday

takes time, at the fixed star sphere, we get a circle that is inclined about  $5^\circ$  towards the ecliptic is. The Copernican "lunar orbit".

Now the strongest evidence for the copernican world view always the explanation (i.e. Reinterpretation of the seen image through the imagination)

the phases of the moon and the lunar and solar eclipses nisse mentioned. The attentive reader will after we have completed what seem to be the most difficult tasks

happily solved in the simplest way and for the most complicated things in the Copernican system found a simple and natural explanation

have the trust in us that we can do this too

Questions in the same simple and natural way will answer.

For a better understanding, let's first see this take the simplest case. That's why we're going to the equator, look to the sky and see

the radiant disk of the full moon. It is  
 Midnight, so according to us the sun is at  
 the other side of the earth, their rays can  
 can't reach us because there are between us and her  
 lix star ball lies. Now how is it that their...  
 .Shine the beautifully glowing full moon  
 to reach? You can't get through the fix  
 siernball through. Let's look at the light half-  
 ball of the sun opposite us, so find  
 us that it is only as far away as those from us90  
 points on the earth's surface. Our half of the  
 Aequators is at 12 o'clock at night  
 Dark. Nevertheless, we see the moon shining.  
 Since the sun's rays can't get through  
 .Slernkugel can pass through, so it is on the direct  
 If it is not accessible by them, it remains  
 just the assumption! that they are in their curved path  
 go further and this way to the moon  
 come.

The image of the light rays therefore corresponds to  
 fgeblndaVIMid  
 the image of the magnetic lines of force that we know  
 obtained when we put a magnet under a paper  
 magncUsdicn  
 bring it and treat it with the finest iron filings - ^ r "f' lines -  
 scatter. The magnet organizes the iron filings  
 to lines that are known as magnetic lines of force  
 draws. The light forms the same lines

in the magnet (solenoid) earth.

One pole of this ball of light is the sun visible in the sky. The other pole we can't see because it doesn't emit any light, but on the contrary the light comes back through him flows to the center of the world. It is always exactly where it is behind the sun. This our finding will be confirmed by none other than the highly respected and praised physicist Faraday. According to him the daily variation of the earth's magnetism (deviation of the magnetic needle - inclination and declination) as if they were separated by two magnetic

The daily variation of the poles would be generated, which would be in the atmosphere of the Earth of apparent motion followed the sun. There are forces above the earth's surface have their place, electrical currents, which run in the atmosphere and which are a particular

create a correct system of forces that orbits the earth once during the day. For the unbiased scientist this statement from one of our best physicists

resounding, objective proof of the correctness  
the ability of what we do philosophically  
found world view.

Woisider Erd-Dieter's proof becomes even more  
compelling if we  
magnet?" the possible variations of the declination are  
strive. In 1580 France had a local  
Declination of  $11^\circ$  SE'. Diefel then took firm action  
until it was only OGrad in 1663. she got  
then weepy, until 1814 at  $22^\circ 34'$  the western one  
Maximum was reached. Since then, she has been taking it  
again  
away. The ancestral pharynx of the fluctuations can be  
found  
Officially unknown yet. The magnet  
"Full Earth' 4 couldn't change fine poles!  
This finding also necessarily points to the origin  
formation of the earth's magnetism within the concave  
Globe. This is where the magnetic poles can find their  
locations  
relative to the earth's surface the respective forces  
change the situation accordingly.

If we didn't have the one that runs through the whole  
earth-  
geographical the ring of egg bearings that hold the  
magnetic needle  
"!\* paf nc ", fo would geographical and magnetic  
Pole poles fall together. That the Eifenlager are real

the origins of the various geographical locations and magnetic poles, results in hch through the irregular lines of ifogons and ifoclines.

There are also those determined by the compass magnetic poles are not exactly opposite, a impeccable proof of the distraction of the world-power magnetic poles through egg bearings. In sufficient height away from the bearings, lower in-

56

riruments certainly ensure the agreement of the mag-trace netifchen poles with the geographical ones.

Jet?! you can also understand why the direction that which was already demonstrated by Ampere, the earth orbiting Earth's flow from Oft to Wefl the perceptible movement of the sun goes and he at noon on the flärkfteen and at night on the weakest ift. The radiating pole of the light ball amplifies fine Power, the opposite pole weakens. There dieter Slrom the one accepted by the Wiffenfchaff Rotation of a solid sphere Earth enlgegengefel?! went, Until now, the Wiffenfhaft thought he was a thermal flrom, although fie has to admit that the Facts of earth magnetism him in would require the opposite direction.

We look the valley pockets that he is in the hollow sphere  
I would quite logically go in the same direction  
orbits the earth like an electric current  
the poles of a magnet, as further evidence  
for the correctness of our system.

Back to the moon problem.\*) The backflowing one  
Light that follows the curvature curves again  
/.ur middle of the world ftrebl, illuminates the full moon of  
.the sides, therefore we see the moon as a result  
this light reflected by him at midday  
night exactly vertically above us. It reaches us  
now without breaking on the wheeled path. We  
Then the moon also in its true place. Emotional  
he continues in his circle around the world  
nchfe, the same process occurs as if the moon  
radiate your own light. The one emanating from the moon  
Light beam is more or less deflected by  
new curved, the incident angle in ours  
Eye changed lent, wfr embarrassed fine place more  
or less towards the horizon, as we throw  
have already described the process in a hostile manner.

So what does the process happen with a new moon? Sun  
and the moon was at the equator at 12 p.m.

57

Lunar eclipse of the earth's surface, alfo the light of the sun reaches  
fine side turned away from us on the direct path.  
That's why the visible side remains dark. We  
fly away from her with our telescopes and optics  
Devices only have a black disk with reddish  
a shimmering edge.

At half moon the process is as follows: The  
half of the moon is illuminated by the light of the

The sun is shining, the other half is in the dark and of course we can only use the exposed one. Perceive page. By the sickle, the almost full one Moons or other ports we need one more or less large part of the illuminated side of the of the moon, while the other part is in darkness. With this we would also have the moonports at the highest level explained in a simple way and there are still the lunar and solar lights.

Let's first take the lunar eclipse and imagine we imagine that the returning sunlight on the Magnetic lines follow similar paths from all soaps returns to the adjoining pole. We therefore get after a kind of shadow funnel that comes from the back flooding sunlight. Now if this light becomes very thin after the middle free channel swept exactly towards the sun, since their light radiates in all directions, so the light flowing back evenly from all sides returns to the sun through the center of the wave. Therefore, one does not emerge every full moon Lunar eclipse, but only when the sun and Moon was right across from me pleading. Let's draw one Line from the center of the moon to the center the sun, so this line must pass exactly through the central point of the world when a lunar eclipse occurs kick foll. This case naturally occurs because of the relative to the physical deviations of the moon

come in.

The process still occurs during the solar eclipse much easier. Between the supervisor's desk

58

and the sun the moon effectively passes through and Accordingly, we can no longer see the sun disk catch sight of. We preview the disk of the moon pass by the sun's disk. That not everyone Month solar eclipse ift, explains it from that The moon also often passed gracefully past the sun - so that it does not obscure the image of the sun.

Now we still have the orbits of the planets and explain the comet. The one next to us The celestial bodies located are Mercury and Venus. We are confused that the same ones were never very far from the Remove sun. Furthermore, we know that fie exactly like the other planets change their orbits for a while change sky. They then move along the fixed star whistling towards the sky in the opposite direction. The technical expression is: it is declining.

The retrograde described by the astronomers mentioned phenomenon if there is now no actual return-running from East to West, but it only appears to us projected from the earth's surface as follows, because the speed of the planet has changed, for his daily revolution around the world finished faster than the fixed ball. The planet then it does not remain, as usual, just for the day towards a point on the fixing ball, But something is getting ahead of itself.

Why find the orbits of the planet that are within Half of the hollow globe is just a spiral circle can present the world, so irregularly? We find the explanation for this process in Disturbances in the planetary orbits caused by the solar forces. These affect the blood pressure ness of the planets as a disturbance factor and speed up or slow down Tie completely certain Gerepen.

With Mercury and Venus, which is closest to the Sun next beg, find the disturbances of course The largest and these two planets can therefore just a little away from the sun. The closer I got

the planetary orbits, including the spiral circles around  
them

Weltachse, against the center of the world, defto  
ringer also find the disruptions. On Neptune, the

If planets are far away from us, they have the greatest effect

weakened. In general, of all the planets the smallest daily circles around the world pull, which he grasps at the same speed as the fixed star sphere travels back. His daily return remain ift to minimal that it erft after 165 years again on the same plane of the fixed star sky to be missed ift. The moon needs to be the same movement only about 27<sup>1</sup>/<sub>s</sub> days.

Let's look at the above-mentioned circulation times, fo we find, dal) which is closest to the earth's surface celestial bodies located, including the moon, sun, Mercury and Venus, in their daily circles around the world axis lag behind the most. The size this daily lagging decreases in the same ratio in which the planets of away from the shaft axis. The bigger the The distance from the world axis is the greater then of course the one to be covered Away. Our chemical and physical Investigations have led to the conclusion that that the force driving the planet is within itself is to be sought, so that the daily remains behind through the longer path that is further from the The planet that stands out from the world axis has to travel is sufficiently explained. The planet is itself an engine.

We would be unsure about the orbits of the planets

je^t clear. The planets also move within the  
Globe in spiral circles around the world axis and  
must look for "eternal, bronze, great visions  
"complete the circle of their existence".

So all that remains are the comets that come from  
the Copernicans as "strange gypsies, whose  
Comet identification documents never meet the  
requirements of a proper  
"Orbits do not correspond to the astronomical police"  
designation

not be. We could be content with this,

60

to confirm this judgment of the Copernicans. There  
but we find ourselves in a pleasant situation  
.u can that the nature and the paths of this  
"weird gypsies" can be explained exactly, like this  
we don't want our findings to the reader  
withheld.

Farthest from the earth's surface,  
the comets move as the smallest celestial bodies -  
if like everyone else in daily circles around the world-

life. Since the depths are so close to the fixed ball, so if their speed is about the same as this that of the fixed parent closest to them. As a result of chemical and physical processes inside of the comet it then suddenly lights up and disappears wraps a tail. Through what lies within him, As the impact force increases, its speed becomes speed is so great that in many, ever larger Ber daily circles (spiral) far behind the earth's surface. He gets into the proximity to the sun, which causes the chemical and physical alkaline processes within it ebb away. The Daily circles become smaller again, he returns near the fixed star sphere. Those caused by the Said processes created power is used up, that Shining has stopped and we won't take it more true. Let's mark ourselves as we already do with the planets, sun and moon have done his Lunch or Midnight points on the fixed star sphere and connect these points with a line, This is how we get the well-known hyperbolas and parabolas the Copernican. For some comets (Enke, Donati, Biella, Halley and others) these advantages are repeated walks at relatively short intervals, there are periods.

If everything is OK, the co-

pernicians say. But we have with our tariff  
ken optical instruments discovered that the planets  
me moons with all possible orbital inclinations  
have. In any case, your system will remember these  
points.

61

often postponed. But not like that. Let's call  
remind us again that they too  
Copernican with all their beautiful instruments  
nothing else can be seen but the flat image.  
The circulation e.g. B. the 10 Jupiter moons around Jupiter  
They can't see them either, only the places  
of the moons in front of the fixed star behind the  
floorboards  
bullet.

There Pich now the moons of Jupiter, from us  
happened, once a little to the left, the other time a little  
to the right of Jupiter and deer are never far away  
remove him, so this was interpreted as such  
converted the obtained flat image into a spatial one and  
ran)  
in fantasy the Jupiter "moons" around Jupiter  
We marked it in an elliptical path

from all points in the fixed star sky  
to which a certain moon of Jupiter appears hostile  
went over and connected these points with a line,  
This gave you a figure from which you could, under  
reconsideration of the movement of Jupiter on  
The fixed sky probably has an elliptical orbit around it  
Jupiter could construct. At Pich there is one circulation  
not to prove Jupiter in any way. Direct  
All that needs to be perceived is the outward appearance  
that can be seen in the sky.  
and the orbiting of the "moons" around the planet.

This is the same process that we see with Mercury  
and perceive Venus and he finds his explanation  
in the same causes. The stronger one on the planet  
outgoing gravity acts on the same force  
and thus to the speed of the "moon"  
once speeding up and then slowing down again  
mend, giving the impression of a circulation of the  
of the moon around the planet. In reality  
The planetary moons also describe the known ones  
daily spiral circles around the world axis. Will be yours  
Speed promoted by the planet, so  
because the circles get bigger, the planetary moons stay  
a little further back than the fixed star sphere.  
In the opposite case, if the planet has the speed

. -

If the moon is inhibited, the orbit becomes smaller. The Places of the fixed star sphere rush forward, we have the view of the retrograde predicted by astronomers called apparition. Eclipses of the planets? Moons are also possible here and prove nothing against our system. Also that the darkened problems in the narrower inner pathway occur earlier must than in the wider external is only logical.

We repeat all movements in space go from east to west without exception from the north to the south pole through the center of the Ursadte de>

World axis going around the world, every day. Also the planetary

The speed of movement is constant in every planet's orbit in itself quite uniform and is essentially

determined by the mass of the planet. The drive

The forces for this movement lie in the structure of the atom

of the planet. But there are influences

larger to the smaller masses or forces

(sun), which causes the well-known phenomena

tions of the so-called retrogression and disturbances  
gen of the planets and those interpreted as orbiting  
Appearances in the so-called planet moons  
bring forth.

A pendulum swinging freely at the pole also  
moves just like a planet in 24 hours  
sometimes in a circle. (Foucauldian attempt). this will  
by the way, from official science as proof  
the rotation of the earth. In reality proves  
it's just that in the atoms of the pendulum weight these  
.the same forces are active as in the planet. Both will  
through the rotation of the ether particles into it  
East-west rotation forced. The pendulum behaves  
like a planet. That falling bodies east of the perpendicular  
is due to the deflection of the plumb line  
the one described, from the rotation of the ether atoms  
resulting magnetic energy that fills the entire universe  
Power. The falling weight is due to its own  
speed less from the all-power to the west  
relegated as the retired Lot. .

65

It would now be the so-called precession,  
the slow migration of the vernal equinox  
to explain the zodiac. The spring equinox  
■Precession can be determined by looking at the Earth's

equator

Position of the sun at the fixed point behind it marked by a star ball during the spring equinox. The Copernican Astronomers claim that this vernal equinox in Over the course of about 26,000 years, the entire animal world

circle and reached its old place.

This seems highly unlikely to us, since in the development of the world over such long periods of time

but progress is being made and so it is essential deviations must come about. We recognize

Furthermore, the observations of astronomers are full at. There is no reason to assume that the

Daily circle spiral of the sun unchangeable for eternity times is coupled with the fixed star sphere. Man

can very well be the spiral as it progresses revolving around itself for 26,000 years

Imagine the whole thing, it moves opposite each year of the fixed star sphere by a small amount.

Now we have some more information about them

The proportions and distances of this world

to do anything in the world. We emphasize that we these dimensions do not owe to direct measurements, but found them through calculations,

similar to how the Copernican astronomers did theirs

Number inflation. However, there is a fundamental

the difference. The basics of our calculations

genes are in harmony with the laws of nature so right, while this is the case with the Copernican is not the case, the results of their calculations therefore it must necessarily be wrong.

Let's start from the Earth's equator. Diefer forms a circle, deffen radius approx. 6370 km ift. We confused alfo effectively that the center of the world from the earth's surface at the equator this number Kilometers away ift. Between him and us must

64

the camouflaged perceptible world is now located. We now want official information from the surface of the earth distances, and true transmitters of the celestial indicate body in round numbers.

This brings us to the end of our considerations  
About the structure and mechanics of the universe  
reached the globe. We only have one left  
To answer the question that many readers may have  
may have appeared: How thick is the layer of earth  
under our feet? And further: what's to come  
afterward? We can't actually ask these questions  
answer. With none of those invented so far  
Instruments it is possible to cut the layers underneath  
to explore our feet.

But by reasoning by analogy we can assume  
men that the layers of earth beneath our feet  
are approximately 200 km thick. The further we get from  
Earth  
surface, the larger the spec-  
ficial weight of these layers, so that on the very outside  
would be the radiant elements undergoing decay  
find the layers of matter again in Aeth  
dissolve. What is happening outside the globe?

66

is beyond any research. The absolute  
lute “Nothing” is inconceivable. It pushes itself towards it  
So the thought literally comes to mind, the globe  
It's a planet that has a lot within it  
giant ball circles around its axis  
pulls. This seems to us for various reasons  
highly unlikely. But we want Uber  
There are no limits to human thinking  
go out. It is enough for us to see the true structure of the  
perceptible universe is described in detail  
to have.

/

67

### III. PART

cosmogony

/

The evolution of the cosmos.

In the previous parts of this work have we have shown how Mensch actually works a view of the construction of the world, the world-images that become important in the life of humanity reached, explained, proved the errors, their Inaccuracy and therefore unusability for human science resulted in a new one Worldview borrowed from Lefer's spirit and found that this new world view is compatible with the Nalurgefetjen and rational thinking in one

sounded ift, necessarily formed correctly  
Tein has to.

How does this universe come about? What powers  
Ichufen and what powers sustain it? What was We "al"  
from pure deprivation and what will be the end?

Let us first consider the extraction of the universe,  
as deer have developed according to the laws of nature  
must in order to reach your current state. To  
For this purpose we must first concentrate on this  
field of chemistry and physics in order to...  
To penetrate the original form of matter, from which it is  
everything else must come into being fine.

Today's natural sciences assume that...  
the constituent parts of the atom, namely the ions and d  
"^^" me

Electrons, the learned form of matter is reached,  
Force and matter are one and the same again (Ind. Die  
Matter as condensed electricity. If you want,  
you can also do the opposite of electricity matter  
in the original form. Yes, they went so far, hey, that  
To imagine the atom as a small solar structure,  
around deffen nucleus, the central form, electrons as  
Planets at different distances and levels  
would cringe. By analogy from the All-  
However, these were found at the very smallest level  
theories that are not yet generally accepted. Any  
to add proof of this state of the atom

bring, if not succeeded to date.

71

According to the explanations below, it exists in space  
no Copernican sun five, so if that too  
By analogy, the atom is a solar fifth  
in small. We expressly emphasize that we  
by no means the validity of the laws of nature, like Tie  
find themselves enlightened by the weapon, want to  
attack,  
but we only criticize the ideas that Pich  
the athletes of this discipline depend on weaving  
of matter have made.

Just like the astronomers with them  
Mammoth telescopes reveal the nature of the universe  
could find out directly, can  
Chemists or physicists with their ultra-microscopes  
research the structure of atoms. All can be found on the  
indirect evidence is invoked. Their products  
Fantasy (theories) are allowed to coexist with facts  
no objections were suggested and efforts were made  
fine to explain the properties of matter.

Logical considerations led to the assumption

smaller indivisible particles of matter, the Atoms. The results of recent research But these areas gave rise to the possibility of Division of the following atoms with the help of radium or electrical forces. The explanation for this was easy given by taking from the well-known “Sun Fyrtemen”, consisting of the atomic nucleus (sun) and the Electrons (planets) just lost some planets could be pushed.

The atom holds the state of the system

no sun- the elements avoided. Dieter However, this analogy is related to the case of the copernic

Canadian systems are untenable. Furthermore, this appears to be the case

These expanding sun shapes are piled together The objective forecaster is highly unlikely.

Every movement of the circle strives for space. The Nucleus of the innermost atom in the Copernica no globe would have to be created by pure attraction the forces of hunger hold the whole world together, tropdem the famous movement dieter uncountable

Marching of atoms towards ever larger spaces  
hreibt (centrifugal forces!).

For this reason, an analogy would be:  
the new worldview on the weaving of matter  
plain false. We can only go from the Zu-  
actions of the universe known to us on the state of affairs  
of matter that we days: we recognized  
in space a polar directed one, dieters through flow  
ming force that we can find even in the smallest particles  
of the universe and the resulting old ones  
Movements are aligned, old from often to  
Weft around the pole dieter Kraft go. Consequently  
Even the smallest particles of the visible ones must  
Matter - the atoms - is permeated by force  
flows in and from often to Weft to get her with her  
World's own eights rotate in unison. There  
but also the power of some physical carrier AtomroMion  
needed, we struggled with an old, permeating air,  
fill all the spaces vacated by matter-  
accept the ether from which everything developed  
and to which everything returns. We eat the ether  
same Urstoff. Recognize movements of this primal  
substance  
we as forces that we use depending on the type of flc  
primordial ether movement light, heat, electricity  
ity, gravity, etc.

But before we continue with the explanations below-  
When we ride, we want to draw very specific boundaries  
and consider to what extent mental knowledge  
ability at all is enough. The absolute nothing ift jji  
unimaginable. We can't even think about it in a limited way  
beginning and an end of the lower world of unification  
ftell. What beyond the world of unity lent  
is located, removes any thought, since the  
Man and his thinking are part of Dieter  
Agreements ift. We can also use alTo as  
Confused scientists accept a God who  
before the beginning of the lower world  
was, in her it and after each distortion  
still clean.

75

From the beginning to the end of the lower achievements  
In the world, on the other hand, natural science must be  
fine,  
To explain the departure and passing of this world.  
Acts of creation, God's interventions in the world of  
invention  
world during your stay we have to start from the front  
flow in out. "After eternal, bronze, great ones  
GefetJen" world affairs are going smoothly

We want this battle from the beginning to the end  
At the end, unroll it in front of us.  
The structure When creation began, there were the

of the universe. the smallest particles of the universe  
resting in space.

This material consisted of small spherical shapes  
Formed of uniform nature, they revolved  
after the beginning of creation very quickly  
lightness revolved around itself (aether), also at the  
Periphery flowing outwards, striving for space.  
This caused them to align themselves polarly, because the  
poles  
were in a state of rest, the others flow as well  
Particles do not fall off. But lack of separation is the same  
attraction to fetyen. The pursuit of space  
Centrifugal force found a temporary resting point  
in the fighting over each other of the individual particles  
at the poles.

The little beads stacked on top of each other, all of them  
evenly in the sense of vascular movement (clockwise  
pointer movement) rotate, now give the impression  
more ripe and polar moving through the entire universe  
threads. The individual particles were also real  
connected to threads because the rotation had to be on  
create pressure at the poles of the individual balls  
was stronger in the middle of the threads than at the ends.  
The restraint was here for the fifth time.

give.

Now they rotated in proportion to their strength.  
comprehensibly long threads next to each other, striving  
for  
Space, Pich flowed against each other and thus got into  
trouble  
in lurching movements, how to create the following  
can be done if you hang ropes close to each other  
in rapid revolutions. From the vertical

74

Threads became spiral threads. The vibrations diefer  
Spiral threads enlarged more and more, needed  
Space, the world “grew”. Diefes Wachfen had to  
The result is that the space between the individual threads  
some parts became larger than the vibrations  
The spirals became too big and they broke.

However, other spirals were given space and they riffled  
This also means that the spiral threads were always  
shorter. Depending on the space you have available  
had threads forming smaller or larger spirals  
therefore their ends meet one another.  
Since they were polarly aligned without exception,

fo these impacts occurred in the north-south direction. According to the two poles to keep the shocks space, but not towards the middle. This is where the from bounced shocks coming from the north with those coming from the south ram menden together.

This collision could happen most easily in the room. terten to the sides by creating the caused neighboring threads to break. The broken Reefed, therefore shorter threads needed less space to swing and were able to find the ones from the north and south, following spiral threads flowing towards each other all possible directions. They robbed intertwined, interwoven and matted I thought there were cables of these threads. Also this one Cables twisted in spirals in the sense of the circumference rotation of the particles of oil or substance (clockwise pointer movement). The ones inside the cable loose threads on the other hand were now that the Rejection from all sides a turning back into the original situation made impossible, no longer possible East-west rotation, but they turned in the opposite direction direction (counterclockwise).

These spiral thread cables naturally had one stronger, corresponding to their larger diameter

Vibration. They broke through with ease  
Layers of primary material spiral threads in their struts  
to space, to the outside. The primordial threads were

75

therefore pushed towards the world axis, interwoven  
turn into cables again in the middle of the white. This  
pushed outwards again and so on until the  
primary material became less and less and the spiral  
threads -

cable, the simplest of which we find in the hydrogen atom  
know yourself in the center north-south  
bumped, interwoven and matted, stronger cables  
formed. 3 hydrogen threads became  $H_3$ , a  
Element that we have not yet proven  
could.  $H$ , +  $ht$ , gave  $H$ , helium, which is combined with  
 $R$ , again connected to  $H_7$  lithium etc. as it is  
the accompanying table illustrates.

A small rotating world germ sucked  
Aether, formed it into hydrogen,  $H$ , and  
Helium.  $H$ , and helium are elementary linked  
(not just chemically) by screwing them together  
Spirals to lithium 7. This has become metal  
because of other vibrations. The rotation sorts

these 5 substances form rings, inside H\ then helium, lithium on the outside. Now helium - lithium are linked together

to boron 11, which is deposited further out. At the Penetration of the maternal lithium layer will occur these are displaced on both sides. Now 3 H form 1 Beryllium metal 9, which combines with lithium to form (metal)

Oxygen - 16 chained. Beryllium with H. there

Carbon 12 and this with H<sub>4</sub> gives 16 again.

Likewise, 3 helium forms carbon and 4 helium

- 16. This is how the elements 3, 4, 7, 9 were created, 11, 12, 16. The tablet explains this as well, and more may be followed therein.

These elements sort themselves according to the atomic weight. With every penetration of the layers the earlier ones are pushed to the side (poleward).

So the layers are arranged as rings, crooked to both Pages next to and on top of each other. At the touch new materials were formed in places. 7 + 9 gives 16, 9 + 11 = Neon 20, 11 + 12 Sodium 23, 12 + 16 - Silicon at 28, 16 + 20 - chlorine 36, 20 + 23 scandium 43, 25 + 28 - vanadium 51, 28 + 56 - copper 64 etc. These

tfinge also camped out. This is how we see one wide hollow spheres are created, inside of which the first processes from the sucked in ether and repeat hydrogen. Now the water material the form oxygen metal H 16 inside.

Here begins a large series of education, by sucking the hollow spherical materials out of the poles become. First, lithium comes in and forms with 16 now sodium 23, then beryllium gives magnesium 25, which was also formed from nitrogen (Boron + H5) 14 with boron to 24, hence the atomic structure weight 24.5. The quantities were different too Mixture unequal. Now boron comes to 16 and turns aluminum - 27, carbon becomes silicon 28, Metallic oxygen to sulfur 52, carbon and Lithium becomes fluorine, fluorine and neon form with it 16 Chlorine-55.5. Sodium becomes potassium 59, Magnesium to Calcium 40, Silicon to Scandium 44, potassium to manganese 55, calcium to iron : 56 etc. The series are very interesting as evidence the order and the hitting of the weights.

Meanwhile, the internal education is changing /u 4H, or 5 H 4 carbon 12. Now arise again with 11 sodium 25, with 12 magnesium 24, with 16 silicon 28 etc., also vanadium, chromium, Copper etc. Nickel is formed from fluorine (12 + 7),

Cobalt, then chlorine, phosphorus, sulfur. This means a tremendous unrest and upheaval begins within half the space sphere. Huge expansions occur, cooling creates chemical processes and gas formation, as chemistry teaches. The series the formation of halogens and metalloids takes place, as the board shows. The hipe of the vapors stretches them Spherical wall out, space is created and now come the elements are no longer available in that order Development as before. From copper and zinc they remain in their chemical relationship - Okay, they develop separately. Continue binding Copper (Cu) + zinc (Zn) turns into cesium, from which

77

the rare earths and precious metals, as well as the Radiant elements arise. The properties vary inherit. This speaks for the correctness of the

Statement more than words. Next shows the

chemical table interesting formations: silver (Ag) made of chromium 1 iron, gold (Au) made of cesium - zinc, Platinum (PI) from cesium + copper, uranium (U). Lead + phosphorus etc. It also justifies the Difference in weight between very similar substances with different properties such as Al and

Si, V and Cr, Cu and Zn, J and Te, Sn and S  
Pb and Bi etc.

Uranium, radium etc. are chains with phosphorus and chlorine, therefore in ongoing elements that explain the radioactivity. These metals decay back into ether.

Through the constant migration of the threads and the work against each other by the different ones

n. - ., rotations created a vortex around the world axis.

the frdkrV™ The finer fabric that has the lowest resistance and ability was always based on the world mean Ring positioning points hit. There he transformed, like us have seen the more in ever stronger cables Therefore they needed space for their vibrations wandered outside. A ball was created. The But the ball doesn't last forever, either the vacuum was on the outside. Had here the vibrations space. The primordial particles of the outermost threads of the cables came loose into the Urmaterial particles (spheres). From neither side pushed and pushed, the latter had no cause to stay together as threads. they were back to ether and only through mutual, interconnected Relatively rare shocks changed their Location. But they got caught up in the vortex again polar rotating threads, whose spirals from the pole

seen from e.g. T. tubes formed. In this way they penetrated all matter Space.

78

At the time the metalloids were created ion a solidification of the ring layers to form a sphere occurred as a result of expansion and cooling, therefore chemical processes occurred. The guns the vapors were drawn in by forpion, rain brought these substances to the point. The hipness of the che- mix transformations and huge prints They then formed mountains and brought melal veins above, the crust reached the highest extent and lo originated inside the thin corrugated ball wall tdream, filled with air and weapons.

The smoldering bullet mite continues to work. Only those .Sioff supply became lower as a result of the final Krufte. At least the spiral enough ether particles pass through the channels of the atoms. The ether flowed through the camouflaged space and became

perpetually attached by the rotating malle,  
in which new atoms form.

The perpetual motion machine. On the outermost The  
world ah

the

Nuclear cable resistance. It repeated itself

79

the same process that leads to the formation of the first hollow  
Kugel had led, once again.

It formed inside the first hollow sphere  
a second of significantly smaller dimensions.  
The etheric penetrating from all sides  
movement (force) allowed a movement out over one  
certain limit of instability is not met. How we know  
but the matter on the outer surface disintegrated  
the first ball, the ether was from the vortex  
in the middle, it condensed again there  
to matter. It happened in the manner described above  
another bullet. The opposing influences  
These bullets caused constant embarrassment  
of the center. The center of the expressed  
Kugel could only get a very small amount of influence from  
the world  
remove the center, once because of the size of the  
Bullet, another time because of its power. The power  
of impacts of both balls acted on the inner and  
although very uneven, so that from their squiggle

movement as a result of the rotation of the atom became the center of the world. But that's how it came in very close to a point of the inner, concave surface of the second hollow sphere, it is »and an electrical contact, a light stream. The “Sun” was eleven.

The disintegration of the outer sphere continued. The Urftoff moved to the world as a primal force (aether). Meantime, more and more matter emerged, which pulled, the two inner balls grew, the outer one fell apart more and more. The ones that are manually re-cleaned inside Heaving balls circled around the for a while Weltmille then lent to the inner surface to sweep away the second ball. There are always forms new balls. The power of the outermost takes constantly decreasing, the pressure of the matter outwards, that Striving for space is increasing again, the outside - The ball grows, gets bigger, but always falls apart more. As the relationship grows, the ball, becomes bigger and more powerful, until then the outer sphere

if it completely disintegrates, giving way to the pursuit of space,  
no need for expansion of the second ball  
Resistance will be met with more resistance.

But now the influence of the outside also has  
ball stopped at the center of the world, the next one  
formed

The ending ball was no longer forced out of the middle,  
It now took the former place of the outer one. The  
Werdon

Bullets that were at this time between the world and  
middle and the surface of the second sphere, the widths  
now lull space, animals circled around them like planes  
Well center, between the newly formed inner sphere,  
which we see today as a fixed ball and the earlier one  
/.wide sphere, our present-day globe.

We don't see the former sun as a planet  
create in the sky. Lower planets, asteroids and  
Comets are located between a fixed sphere and  
the inner concave surface of the jet to the outer  
former inner sphere.

But the flow of the substance continued  
All the processes that led to it emerged again  
Fifth evolution of the first world. The second  
The forming ball came into electrical contact again  
with the fixed ball and we see in ours

Sun the effect of this process. L other sun

recorded what happened to him. At the moment of  
Death now, in which the approximately 20 atmospheres  
Pressure of the life cells (Osmofe) stops, the life  
Ocr death cells become dead protein, thereby releasing  
the

Impressions arise as the tremendous power grows  
once to swing.\*) As a result of the construction of the world  
but every power that is released goes to the world center  
point. Here, where new life cells are constantly forming  
and slam them into weeds that don't yet have any  
like having a past conditioned by impressions,  
causes the sum of the "flowered" brain  
"mentioned" people's strength on a new  
formed life cell the same impressions that in  
Brain of the people "recruited" to the surface of the earth  
areas were available. The "I" has already opened up  
transferred to a new material body\*\*), i.e  
reincarnated, just in a different sense, in terms of strength.

~\*) Say those rescued at the last moment from grave  
danger to their lives  
In agreement, all of you before falling unconscious  
your previous life will disappear in front of your life with  
incredible speed -  
was rolled.

»•) In principle, this is the same process that occurs with radio  
BildObertragun” takes place in the middle of the soul cell.

104

Let us learn again what has been swept over the “I”  
jgf^Sff\*\*,  
to find out more about the meaning of this process J  
to become clear. The heritage wall of all previous buildings  
ie Ucn  
nerations of the eye, the device influences in the eye and  
body  
view of birth, modified by that during  
impressions received from the environment  
The sum is that which affects the new matter  
transferring “I”. The new body there  
“I” obviously deviates from the rest  
of the human body on the surface of the earth  
tremendously. He 10 who reigns in a pure new place  
prevailing force relationships (heaviness, light, etc.)  
Fit and fit together from life cells,  
which is currently the largest structure in the universe  
have reached the highest level of perfection.

We assume, as described earlier, that  
the construction of the life cells by all at the time of theirs  
Behave when effective forces arise! becomes. The access

ramming these cells into individual cells  
On the other hand, it can only be explained that an im-  
moment of emergence of a cell  
Starting from this, I add a number of cells  
to an individual Weren. Diefea \* We-  
ren will pick on the inner concave surface  
the next ball (Urfonne).

As soon as the stars form a constellation  
whose powers correspond exactly to the state of  
development  
of the "I", then the current body "dies" D/e Rcihe det  
of the "I". The "I" is then applied to the already inkaTna  
üon  
described way into a body on the inner  
concave surface of the next oldest sphere incarnate  
ned. From there the series of incarnations continues  
the planets and the moon on the earth's surface.  
Finally the cycle begins again, — Od  
infinity. The "I" is in itself immortal. Mortal  
is only the body that it has as its home.

The question arises: why does this happen?  
"I" in reincarnation has the way over everyone  
Planets? The only answer we can get here is an analogy

fSÄ\* 5 s?! u? tj\*\* Vo " of the youngest highest  
The earth's surface developed life cells in the center of the  
world up to the oldest  
The most coarse material on the earth's surface is one  
huge jump. But nature doesn't make leaps  
The path of the "I" follows the path of development  
development of life from the center of the world across the  
planets  
and the moon to the earth's surface. It is possible,  
that during the effect of the transition of the  
"I" determines from one planet to another  
Star constellations a feedback of forces  
takes place in the sense of the radio apparatus, the

»a 7Msiönd The "I\*\* as such is immortal, but changes  
constantly his condition. With every incarnation in  
Already existing cells change their genetic makeup  
and the development status of the respective environment

giving its nature. The thinking activity, reacting to the sensory impressions is through the interaction between the celestial constellation expressed at the moment of birth brought with it nature of the "I" and the Hereditary mass of the respective body is determined. The result is the state of the "I" when leaving of the body. — ad infinitum. —

/

106

The meaning of the world

If you think about the development we have described, creation and development of the world from the ether to the cause of to the human body of the Aryan race on the Being - Earth's surface, the development of the "I", the beginning and further development of the organism Well, so \*■\* The question of this also arises without further ado Essence of God, who is the cause of being. Further

the question of the absolute beginning and end of being.

The “nothing” from which everything arose must be unimaginable. Also an absolute beginning and an absolute end. So these go beyond the limits of human knowledge. What we do with the help of thinking can fathom is the nature of the appearance world. The underlying cause—God—does not exist in the sense of force and matter and therefore evades scientific investigations.

It's not nature, it's the world of appearances. Wonderful, inexplicable things, but the laws of nature. The dynamics of the system, the divine world order, according to which all existence follows a certain rhythm swings. The eternal dying and becoming. Even without matter nor force - i.e. "nothing" - that is the principle of what is happening, the actual cause of the world of appearance, therefore divine. \*)

•) An example may explain this: A single bank note is a printed paper. Its matter has no effect. Nor do thought claws come from him. And nevertheless the invention of money and the associated labor market man's life has been transformed more thoroughly than ever before

another invention. The power of thought is incredibly great, which is triggered in people's brains by the monetary system become. The dynamics of the system, itself a "nothing", neither Force no-ii matter, makes the division of labor possible and thus the Existence of today's humanity. Any change to the "system" - Inflation or deflation - have enormous consequences on force and matter, can destroy entire peoples.

107

The creature  
Goies

The absolute one  
logic of  
Things

The divine

In humans

This “nothing” in the sense of force and matter, the cause of the phenomenal world - God unconscious of himself. So there is the end very close that the development of the world is the purpose pursued to create a being in which God is can become conscious of oneself. Is the human being in the course of development towards knowledge all natural laws and thus the objective tive world of divine order, then he will be equal to God, in absolute terms Harmony with being, God and man are one. The meaning of the world is fulfilled.

But already today, because God is there before the beginning of the world of appearances, an absolute logic of the things exist. Something that lies in all being constant striving for harmony with God. This is the deepest foundation of logic in human thought ongoing, the still barely researched laws of thinking. The absolute logic of things is beyond belief to become conscious in humans. This pursuit can only find expression in human thinking the. This is why great thinkers and seers also say, \*) that they are deviations from logical thinking

feel pain.

The divine in murder appears to us as something independent of the respective state of the "I".

constant striving for absolute harmony with that Being, union with God. It happens in everyone Humans, as well as existing in all of nature.

The extent to which it takes effect depends on the condition

creation of the individual in question. Developmental state determines the degree of training possible effect of the divine principle. All on which impresses people and influences their thinking activity.

Influencing forces can, however, in the long run absolute logic of divine authority is not

109

The new ethics

The promotion  
development

The center of the world  
as a manifestation  
of God

The skill  
of humanity  
is from her  
thinking  
flows.

Here we have to ask ourselves the question: What  
we can do the development today  
the world to perfection as well as the development  
development of the lower "I" towards harmony  
to promote being?

We have recognized that the development of the world  
(formation of new life cells in the center of the world)  
although,  
as well as the development of the "I" from the  
gratitude activity depends. Do we want the world?  
To change the way people think  
change.

Furthermore: All thought forces meet in the world

ram the center. That's where the focal point of the toxic forces in the world. Is now in the whole Nature the divine principle works and urges this actually expressed in thought activity, This is what those gathering at the center of the world must do

Thoughts are allowed to reach the highest degree of consciousness-

len, the God in the present state of development the world can have. The center of the world is also that Manifestation of God and there all thoughts here come together, if it is actually the situation of the world feele, omniscient, omnipotent.

Since the stronger force is aimed at, the to judge the weaker ones equally, which is why the ones here are called

mental power again on that

thinking of individual people. The

The sum of all the thoughts of individual people

the wide world around us influences also in every time point the fate of the world. About this skill

To influence things, it is necessary to think

through humanity itself in ethical terms

to influence the thoughts of the senses

common humanity in certain channels

to steer. (The power of the idea)

Since the thinking of the individual human being varies effect between fine disposition and the of

external forces acting on it are generated,  
 so we can only so improve thinking  
 influence that we understand the circumstances, the  
 conditions of existence  
 improve individual people's conditions. This  
 but is only possible if we are the cause of the suffering  
 recognize in all its forms. All our  
 Measures must be consistent with the nature of the thing  
 or  
 be adapted to human nature.

The religions of all times sought man is man  
 to improve by preaching morality. That's it with moral  
 teaching  
 but, as experience teaches, nothing can be achieved, \*" D  
 "> e ""  
 because in human nature that's what it is  
 Selfishness is present. To condemn this one  
 it does not begin. His oppression triggers opposition  
 forces that also do not serve development.

Basically, there is space for everything in the cosmos,  
 if it fits harmoniously into the whole.

We must recognize the nature of things and them at the service of human development.

Egoism can also be overcome through the right knowledge of being in the service of development. Once man has recognized that everything he does, he does for himself, then will his properly recognized self-interest? him Don't let bad things happen again.

Everything he does or everything that happens to him it leaves an indelible mark on his brain and becomes part of his immortal "I". A real selfish egoist will always strive to the perfection of his ego, his "I" through his hand-to-hand to constantly improve. But beyond that he will control the human institutions in the world seek to perfect themselves in such a way that those of them outgoing stimuli on the senses or brain activity people's ability (thinking) always leads to good, greatest possible harmony with the divine principle will trigger.

On the different areas of human facilities applied result from such

The knowledge  
of being pre-  
suspension for

Findings and completely new demands. The host  
social life, in which everyone today strives to be of  
to live on the work of others, to exploit, politics,  
which serves to make this event possible,  
the current rulers as large as possible  
a portion of the unemployed income  
and all other human institutions must  
be fundamentally changed.

If the "I" is actually immortal, everything falls,  
what a person does reflects back on him (karma).  
it makes no sense to get involved in the fight for everyday  
life  
Piece of bread or about power and possession itself  
to corrupt spiritually.

Furthermore: The "I" always returns to the  
Earth's surface back. It is therefore not the same-  
valid, in what condition the human being is  
material at the next return of the "I"

finds. The “I” becomes the child of these people born and must then be within the world existing human facilities live.

Reason enough for the “I” to put all its strength into service of progress. The social solution

Question, keeping the breed pure, high breeding

Human race are therefore important for-modifications.

All previous religions preached morality and promised reward after death or Punish (carrot and stick) and thus suffered a fiasco.

Why? We have no intention of any

To fight religion, but just want to focus on it point out that the knowledge of being is the suspension for the religiosity of modern man

is. Today there is the opposite of religion -

Science because the teachings of religion are not more in harmony with the human condition

To bring knowledge are and because on the other

Page the science as a result of the Copernican

System arrived at a position that

Science in no way implies belief in God out of. Ultimate knowledge, highest knowledge leads again, as we have proven to God.

/

## Final word

This brings us to the end of our considerations arrived. Unfortunately the limited space allowed this first introductory text is not the one exact philosophical elaboration of the material. I often had to contend with the mere presentation of the new

Pert's ideas are enough. After all: on the one hand Page Copernicus, the Finnish and purposeless being the and offenses of the well-known giants Emberballs. Finally, the heat death of the universe. Dead balls in eternal, icy night. On the longless dust planet earth man as even more inconsequential dust and for that matter slightly more highly developed monkey animal.

But we're still alive, she thinks to herself, tiger worldview biased humanity and

acts accordingly. Everyone is aware of the consequences  
Wars, fights for property and power for everyone  
against all.

On the other hand, New per f. With a few  
With bold thrusts he throws the entire house of cards  
down  
materialistic worldview overboard  
and allows an organically developing universe  
unfold before our eyes. Was humanity  
in Copernicus a “nothing”, so here everyone becomes a  
individuals in a creative relationship with the world  
brought whole. Man returns to  
Full feeling of his spiritual power and his human being  
tums. He realizes that although man is a project  
product of his circumstances, but the circumstances  
were created by humans. Always wa-  
There are individuals who have influenced the behavior in  
history  
knowledge changed, which then highlighted other people  
brought.

Copernicus perhaps suspected what disaster would  
happen  
Theories about humanity came when he was  
refused to publish his writings before his death  
admit? They were ultimately the cause

materialistic time that has just come to an end  
 age that did such great deeds on a purely materialistic  
 basis  
 areas and humanity in the process  
 destroyed. The individual human being became the ma-  
 schine, degraded into a herd person.

Karl Neupert has the greatness of spirit  
 accomplished to overthrow these gods. Like too  
 some details of his worldview can still be improved  
 be in need of attention, on the whole it is def-  
 Ten truth is established beyond a doubt. The cultural  
 education  
 However, the effects of his teaching can only be  
 if it is possible to give this to the greatest possible  
 circles of spiritually interested people

Making vocals only in this way is also possible  
 to force the "Republic of Scholars" to take a stand.  
 Next to the solution of the social question  
 nothing is as important as getting a new one  
 to achieve ethics. Copernicus struck unbelievably  
 want all ethics dead. This also explains them  
 Efforts of the Catholic Church to copy the  
 canic system to suppress. Yes, you are lost  
 seeks to actually believe in the infallibility of the Catholic

Italian church to believe, whose judges in Rome in 1633 judged the Copernican system: "It is absurd, philosophically wrong and formally ke^erifch". It was not until 1828 that the church lifted the ban.

We find those who are this oppressive want to excuse politics, or somehow a paternalism or oppression of the free human public activity by the state, church or Authorities speak up. But if you look at them Consequences of the new materialistic world view in relation to religion and ethics, fo one must Church granted the right of self-defense. Have We all do that in our current circumstances Lack of real, confusing knowledge of the Connections, also in purely economic terms, to feel. Delivery will only come when humanity returns to true ethics

115

fought through. The "mockery born out of dirt and Fire", which is based on the Copernican approach Cosmos is allowed to share, leaves in its pitiful There is no poverty at all for the thinking person Ethics too.

All previous worldviews known to us firmly established this people in a personal relationship with the world all. Yes, linked the human being and his life intimately with the fighting in the starry sky. Think of Afrology or the old ones God's legend. From infinite distances could However, the Gertirne no longer has any influence on it People exercise and it only makes sense if Afrology is therefore viewed from the official side Scientifically portrayed as a hoax.

I don't want to take a lance here for today Afrology break, but don't want to miss the Followers of astrology on the contradiction between their teaching and the Copernican canine to point out a worldview that quite logically leads to the rejection of Afrology by the official side Aftronomy led. From the standpoint of copying kaner out of harm's way, certainly rightly so. If e.g. b. the light of what Afrologists consider to be extremely evil Algol often referred to Fixfterns for many years up to needs us, then how can the evil ones Effects arrive "in time"? Diefelben But the Afrologists would also have to give reasons, especially fept that Tie is actually exceeded by her wits. Find, testifies to the rejection of the Copernican canine force world view.

Religion also has the greatest interest  
the strengthening of atheism  
compelling Copernican system. How come?  
because in this incomprehensibly large little Copernican  
monkey  
Univerfum pick up the irrelevant speck of dust  
the equally relevant mote "Planet Earth"  
come into a personal relationship with God. In-  
within the Copernican view of the world

116

There is only one thing: either science or religion.  
A harmonious union of the two was impossible.  
But if atheism is the goal of the wiffenfehaft? No!  
True throwing fear must lead to God. If that  
left truth explored, the objective world discovered  
found, To humanity is returned to God  
fine. God and Menfeh find one. Because all sin  
ift not throwing, misstep. The one who knows everything  
ift above it. If people would all  
Fetse of being know, there would be no suffering on the  
World. Everyone would be in the interests of each other  
the highest level of development in the world  
possible happiness.

Enough and good. We have in this book  
the inaccuracy of the Copernican worldview  
verified. His hostile nature to humanity,  
One needs to go through anti-cultural effects  
Humanity that went through the World War actually  
not to be proven further. I therefore address everyone  
who is honest about the rise of humanity,  
the call to distribute this book. It  
First of all, it's about the official throwing festival  
to force one to take a stand, to break the spell of death  
to break without fail. If this happens, they will  
Path for the cultural impact of the new  
worldview free. Criticism cannot harm us, lie if  
desired us. Truths cannot be reflected  
lay, at most, kill. Get to work!  
Help progress win!

drawings, tables,  
special explanations

number 1

## The refraction of the light beam

No. 1

### The refraction of the light beam

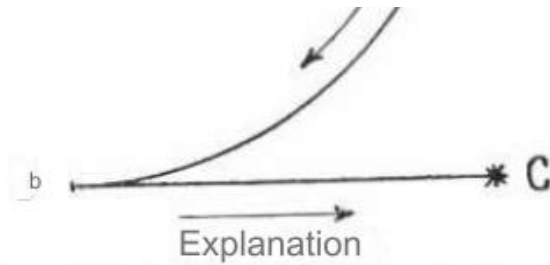

#### Explanation

The light beam emanating from the underwater T. O. is refracted as it passes through the air. The eye O.B. now shifts the location in the direction of the angle of incidence, thus looking for the object at S.O. Due to reflection, the moon appears — at the same location. The "visible image" therefore proves nothing about the "true locations".

No. 2

### The curvature of the light beam

The light beam emanating from star A in space reaches the eye of observer B at an angle of incidence of 0 degrees. The eye sees the location of the star exactly as in the drawing above in the direction of the angle of incidence, i.e. at C, which is on the horizon.

## Explanation

The light beam emanating from the TO lying below the water is broke into the air when flipped over. The eye OB is now moving it

Place in the direction of the angle of incidence, so look for the object

SO - Due to reflection the moon appears in the same place. The

"Visible image" therefore proves nothing (for the "true places").

No. 2

The curvature of the light beam

A

## Explanation

The beam of light emanating from star A in space achieves this

Eye of the operator B at an angle of incidence of 0 degrees. The

Eye sees the location of the star exactly as in the drawing above

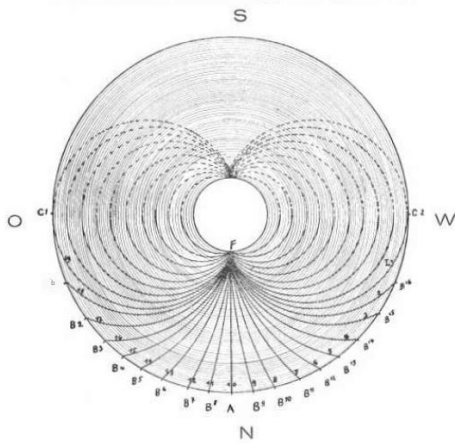

in the direction of the angle of incidence, i.e. at C. the isl on the horizon.

No. 3

### The curvature of light in space

Outer circle = Earth's surface at the equator  
 Inner circle = fixed star sphere  
 Dense circular lines gravity waves  
**F = Fixstern**  
 A place where the light from a star reaches vertically.  
 B1-16 Places that the light of the star reaches at a greater or lesser angle of incidence.  
 C 1 and 2 Places that the light of the star just reaches, "It sets or rises".  
 L1-19 Light rays (in the drawing circular arcs, in reality due to the different deflections on the different parts of the path ellipses, corresponding to the magnetic lines of force.  
 Dotted: Returning light rays that do not reach the earth's surface were enough.

### Explanation: The light from the fixed star F radiates

out in all possible directions as a wave sphere. To reach location A, it cuts through all layers vertically, and is therefore not deflected. The light rays reaching locations B1-16 and C 1 and 2 must cut through the gravitational waves more or less obliquely on their way and are therefore deflected according to the known laws of refraction. Consequently, each location sees the star at a different angle of incidence.

The sphere of fixed stars rotates constantly in the east-west direction. As a result, the light beam 10 moves from location A to location B 9, which then sees the star directly above it, since light beam 10 is not deflected. At the same time, light beam 11 is then at location A. Location A no longer sees the star vertically above it, but westward in the direction of the angle of incidence towards the "horizon". Or C 1 no longer sees it at all, since the light ball of the star no longer reaches it. It set for location C 1.

The sphere of fixed stars rotates once every 24 hours. Consequently, the position of the star also rotates. Every point on the equator is therefore reached by its rays at constantly changing angles of incidence for 12 hours. The eye always looks for the position of the star in the direction of the respective angle of incidence, just as when looking at objects under water. This creates the greatest optical illusion known to us. The impression of a bell placed over the earth, called the sky or firmament, in which the stars rise, culminate and sink below the horizon again.

Auherer Circle Earth's surface at the equator

Inner circle fixed sphere

Dense circular lines heavy rolling waves

F fixed star

A — Location. which the star's lidite reaches vertically.

B 1 - 1 6 places that dosLicht the star under one more or less

rough inclination angle is achieved.

C 1 and 2 places that the light of the star just reaches\*. .He goes under, or on".

Li - 19 rays of light | On the drawing circular arc, in reality because of the large amount of distraction on the different parts of the path ellipses, corresponding to the magnetic lines of force.

Dotted: Backflowing light rays that do not reach the earth's surface were enough.

Explanation: the fix, ern F still radiates as a wave ball

all possible pages. To get to location A reach it, it cuts through all layers vertically, so it is not separated directed. The light coming to places B 1 - 16 and to C 1 and 2

The gravity waves have to radiate more or more on their way

cut less crookedly and are therefore known Deflected according to the laws of refraction.

Consequently, everyone sees place the star at a different angle of incidence.

The fixed star sphere constantly rotates in the direction

east - west.

As a result, the light beam 10 travels from location A to location B 9. the

then sees the star exactly above you, since light ray 10 is not there

is distracted. At the same time there is a beam of light 11 at OrteA. Location A no longer sees the star vertically itself, but to the west in the direction of the angle of incidence

.Horizont". Oit C 1 no longer sees him because he the Lichtglobe of the star no longer reached. He went for Location C1 below.

The fixed star ball rotates once every 24 hours itself. Hence the location of the star as well. Every point The equator is exposed to its rays for 12 hours constantly changing angles of incidence are achieved. The eye searches always the location of the star in the direction of the respective incidence angle, just like when looking at objects under water. stand. This creates the greatest optical illusion, who we know. The impression of a bell placed over the earth, called heaven or firmament, where the stars rise, culminate and sink back below the horizon.

## Emergence of the seasons

No. 4  
The curvature of light on the Earth's surface

Explanation

The light beam emanating from 1 and 4 reaches the observer's eye at the horizon, so the eye sees the top of the mast A and the bow of the ship C at the same place. Star X and the top of the mast C (3) are seen "higher" due to the greater angle of incidence to the horizon, namely by the angle a. The approaching ship thus appears to "rise" until it reaches the horizon.

Mountain 6 is visible higher in the sky than mountain 5 at an angle b. Mountain 7 is invisible behind mountain 6 because the light rays emanating from it cannot pass through mountain 6. If the observer's location is moved higher according to the light curves, mountain 7 can also be seen.

Star P is visible at the top of mountain 6, without determining its true location in space.

### Explanation

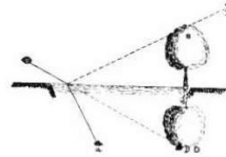

Parallel to the plane of the equator, the sun moves in daily circles in a conical spiral from the Tropic of Cancer to the Tropic of Capricorn and back again. At the time of the equinoxes (March and September) its rays cover the earth's surface from a (South Pole) to a' (North Pole). The sun moves in a spiral circle every day, which is why all places on a meridian have sunrise and sunset at the same time.

In December the sun circles around the Tropic of Capricorn. Its rays extend from c-c'. Since it circles daily in the plane of the equator, the larger half of the light hemisphere is constantly in the southern hemisphere of the earth's surface. If you imagine the rotation of the light hemisphere in a three-dimensional way, you will find that the places between c and b are in light all day, while the places c', a' and b' are in darkness. In between the length of the day increases with increasing southern latitude.

In June, the same is the case in reverse. The day. Now the North Pole is constantly in the light, the South Pole in the dark. The further north, the longer the

- 2) Tree top b
- 3) Moon c

If man had no possibility of directly examining the image seen at location D, he would assume that the true locations of the objects seen at location D were also there. In space, the possibility of direct investigation is lacking, so man has so far been forced to look for the true locations of the stars at the locations suggested by the optical illusion.

## Explanation

The eye sees at location D in the water.

1) Stone a

2) Tree mushrooms b

3) Moon c

If humans had no possibility of direct examination of the picture seen at Ort D, he would find the real places of the objects seen at Ort D “also precisely there”! assume.

In space there is the possibility of a direct investigation, so

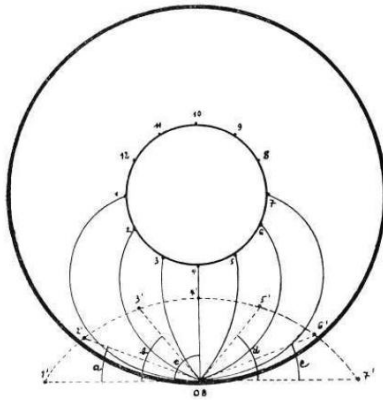

that man has been forced to do so until now. the true locations of the stars to look for the places imagined by the optical illusion.

## No. 7

### The firmament as an optical deception

No. 7

#### The firmament as an optical illusion

Outer circle = Earth's surface (equator) Inner circle = Sphere of fixed stars O, B, 1-12 1'-7'  
 Location of the observer = True locations of fixed stars  
 = Apparent locations of fixed stars  
 = 1-7 Straight line (1-7) (dotted) Semicircular line (1-7) (dotted) a-e Angle. Horizon  
 Firmament

#### Explanation

The light from the fixed star 4 reaches the observer's location in a straight line and is therefore not deflected. The observer's eye therefore sees the apparent location of the star in the direction of its true location.

The light of the fixed stars 3 and 5, on the other hand, is deflected and bent by the gravitational waves. The eye shifts their locations to 3' and 5' according to the angle of incidence of their light rays. The angles b and d show the distance of their apparent location from the horizon.

The light from stars 2 and 6 is bent even more. The angle of incidence is correspondingly greater and therefore the eye moves its position further towards the horizon in proportion to the angle of incidence. The angles e and a indicate the distance from the horizon. (2', 6').

Due to the curvature, the light from stars 1 and 7 reaches the observer's location at an angle of incidence of almost 0°. Accordingly, the eye shifts its location to the horizon (1', 7'). The stars are just rising and setting.

1-12 True Locations of Fixed Stars  
VT apparent bore Ori of the fixed stars 1-7  
Straight line (1-7) (dotted) horizon  
Holb circle line (1-7 dotted) firmament  
ae angle.

## Explanation

The light from the fixed star 4 reaches the observer's location on a straight path and is therefore not distracted. The eye The observer therefore sees the apparent location of the star also in the direction of the true place.

The light of the fixed stars 3 and 5, on the other hand, is caused by the gravity Kroft waves deflected and curved. The eye moves its places according to the angle of incidence of their light rays at 3' and 5'. The angles b and d show the distance of their apparent location from horizon on.

The light from stars 2 and 6 is bent even more. The angle of incidence is correspondingly larger and therefore misplaces the eye their location corresponds to the angle of incidence and even more so to the horizon to. The angles  $e$  and  $o$  indicate the distance from the horizon.  
(r. 6').

The light from stars 1 and 7 reaches as a result of the curvature the viewer's location at an angle of incidence of almost  $0''$ . accordingly the eye moves their location to the horizon (V.T).  
The stars are just rising. unfer.

No. 8  
Moonpport

### Explanation

Due to the small size of such images, the curves are etc. only listed possible, only as an aid to thinking: The moon orbits internally

half 29', roaring towards the sun remaining from N over 1st V.

L again to N new moon. The sun is behind him. he has Light at the back, shadow at the front. The first quarter (1) is the light

facing the sun on the right, at full moon (V) the moon is on all sides

Ropes illuminated, at the last quarter (L) the light of the sun is babbling

from the left. The sunlight falls in the intermediate spaces World core around. crooked on the moon compared to ours

Locations on Earth. We only ever see this lowering "Image" radiating right to the crust is the same in all places (not

1-N-4-V. So apparently east-west, as arrows show. F is the shadow cone of the sun S' in the room at the back at V. - device of

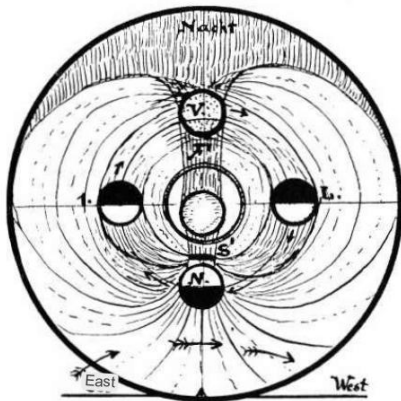

Full moon (spirals!) in the cone, this is a lunar eclipse.

The creation of the elements.

The creation of the elements.

No. 8 Moon phases

Explanation

Due to the small size of such images, the curves etc. can only be drawn distorted, just as a mental aid: The moon circles against the sun within 29 days, lagging behind the sun from N via 1, V, L back to N at the new moon. The sun is behind it, it has light behind it, shadow in front. At the 1st quarter (1) the light is on the right facing the sun, at the full moon (V) the moon is illuminated on all sides, at the last quarter (L) the sun's light falls from the left. In the intermediate positions the sunlight that flows around the core of the world falls on the moon at an angle compared to our position on earth. We only ever see this "image" shining perpendicular to the crust in the same way in all places (not in direct "straight lines", but on the earth's surface in the familiar curves). The daily orbit is the other way round 1-N-4-V, so apparently east-west, as the arrows show. F is the shadow cone of the sun S' in the space behind V. If the full moon (spirals!) enters the cone, there is a lunar eclipse.

No. 4

The curvature of light on the earth's surface

## Explanation

The light beam emanating from 1 and 4 reaches the eye of the viewer»

Viewer's horizon, so the eye sees the top of the mast A and the

Bow of ship C in the same place. Star X and masthead C (3)

become "higher" due to the larger angle of incidence to the horizon

seen, namely around the angle  $a$ . The approaching ship "rises"

so apparently up until it reaches the horizon.

Mountain 6 is visible higher in the sky than Mountain 5 at angle  $b$ .

Mountain 7 is invisible behind Mountain 6 because of the light rays emanating from it

Light rays cannot pass through Mountain 6. You move it

As you can see, the viewer's position is higher according to the light curves

also mountain 7.

Star P is visible from mountain peak 6, but the true location is not

in the room would be determined by it.

Ä Equator

3 = solar disk

Outer circle Earth's surface (meridian)

Spiral Real path of the sun

a. b, c, a 1 , b 1 , c' - places on the meridian

Hatched lines ■ Rays of light emanating from the sun.

## Explanation

The sun moves parallel to the plane of the equator every year

in daily circles in a conical spiral path from the tropic of Cancer to the Tropic of Capricorn and back again. To The times of the equinoxes (March and September) cover their rays

the earth's surface from a (south pole) to a (north pole).

The sun

draws a spiral circle every day, which is why all locations of a meridian

at the same time sunrise or -have doom.

In December the sun orbits the Tropic of Stone bucks. Their rays range from cc'. Since they are in the daily

plane of the equator, the greater half of the light hemisphere constantly in the southern hemisphere of the earth's surface.

If you imagine the rotation of the hemisphere of light plastically, it is like this

one finds that the places between c and 1» are in the light all day long

lie, the places c\*. a' and b 1, on the other hand, in the dark. Between

The length of the day increases with increasing southern latitude.

In June the same thing happens in reverse. Now it's lying

The North Pole is always in the light, the South Pole is in the dark. Depending on North, the longer the day.

The creation of the elements.

L

Chemical symbols and atomic weights of the elements.\*)

list of tables of contents\*

Explanation of the chemical tables

To II. Halogens and metalloids. The order proves it! in itself the implied education already through the proximity to the primal elements,

The board shows the formation of the basic forms Li, Be, C, from which the two branches O and Si as well as F, Cl and P, S. Mixing the two streams  
On the one hand, the metalloids of sc- his Sb, on the other hand the halogens and noble gases of Ar to ). The formation of the elements is noteworthy from the neighboring predecessors: e.g. B. the sub- separate J and Te, Sb and Sn, A and K, Se and Br. Si and Al, Ge and Ga etc.

To IV. Metals. The arrangement does not adhere to the so-called so-called "Periodic System". It should be noted that the elementary chain has nothing to do with the "chemical" connection has in common (Mn KO is not the same KO the chemist). There were also original forms, e.g

0 16, which are not gas, i.e. hard metals, in contrast to gas binding, which is different degenerated soft molluscs formed (Na, K, Rb, Cs, Sr. etc.) Finally, the blasting materials U and Th were created. which decay again into ether.

The two tribes are Li and Be, which belong to each other

Concatenate 0 1. This "primordial oxygen of a solid type forms now a series of elements from Na to Ni one- on the one hand and from Mg to Co on the other, where

the ele-  
elements of the other board can be included. Then  
Cu and Zn are formed. Both combined give primordial  
Cesium, which produced the elements from Ta to Th.  
Cu formed the elements from Ru to Li, from Zn  
were those from Sr to Li. The side row B, Al  
resulted in In to Li. Today's soft elements Well,  
K, Rb, Cs are products of the latest education from the  
Gas-oxygen. Considering the versatile bin-  
possible, it is clear that one always has to  
of varieties such as Eka-Manganese etc. will be found,  
because  
Most elements are made up of a few bin-

connections together, which are separated in places  
came and met other similar outsiders  
ties, so that special varieties occur. Be-  
Comparisons of the intrinsic circuits are worth paying  
attention to  
physical and chemical aspects from the  
given compositions. The ones about uranium and  
Rescues beyond Thor are crumbling ones  
Radiant elements that do not leave our zone  
undecomposed  
are sufficient. By splitting off H s and He atoms  
Element conversions are possible, e.g. b.  
Lead 207 in gold 197 or iron plus chromium  
elemental silver etc. The effect of the ray -

elements can be derived from their formations P, Cl as disintegrating and rebuilding elements easily understand. The "Rare" series is interesting Earths - made of Cs along with Li to Ti, which contain all atomic show weights correctly. The board of structures of all the elements will be presented later in a se-preliminary works appear.

The atomic theory of Niels Bohr, Rutherford etc. according to electrical interpretation, according to which the "order"

number or atomic number" identifies the element is supposed to be, is fundamentally wrong. That the element formation

not in a number-row development went, the following process will show:

1) Li - Be O. Again O with Li Na 23. An- on the other hand O - Be Mg 15.

Now: 2)1 Na OK 39 3) IMg O Ca 41 2Na O Cu 62 2Mg O Fe 56\*)

3Na O Rb 85 3Mg-< C Sr 87

4Na O Ag 108 4Mg+C Cd 112

5Na O Cs 131 3Mg+C Ba 137

8Na O Hg 200 8Mg+C = Ra 212

Also: 4) 1A1 + CK 39

2Al + C Zn 66

5Al + C Zr 93

4Al + C Sb 120

8Al + C Ra 228

\*) O decays into C He

Created from the 9 elements Li, Be and B with O or C now a number of rings as a gift rib to the hollow sphere. Now from O C came so-Go ahead, the essential elements were there.

Equilaterally formed from C+Cl F and the Metalloids, in contrast to the metals above. From these main rings we see by means of the Tabelle the intermediate elements emerged.

After cooling, chemical reactions then occurred bindings.

No. 9

The formation of the hollow sphere Earth

## Explanation

The figure shows the storage of the Ur Rings of the Alomc for holding bullet. The pale Atotn forms borrowed from the Poles, hence Wosser and Ell there, at Aequunlor, are the heaviest atoms in the depths.

This is how the LoRerunR was called in prehistoric times when rotating, under internal gas

press. During later cooling, changes occurred later

Other specific weights (severe vaccinations can occur in... Solid states can be light substances, e.g. B. Rh. Cs or vice versa Fe Cu

etc). The metals that were still flowing traveled as veins and streams.

Chemical catastrophes under the bark formed Uer. e and valleys, the

geological forms. When in the "Nidils" you solve this hollow ball

Ether on. The Pleiles say how he is just from the world comes, flows laterally, is narrow.

This was a long-term process. Few gills

Initial shapes form a small ball. The further absorption from Stof: forms viclf.1 hc elements and läli! the ball as

long as wadi-  
sen. until hardening inhibits the processes.
